The \texttt{revtex4-1} document class of the American Physical Society \textsuperscript{*}

Arthur Ogawa \textsuperscript{†}

Version 4.1r, dated 2010/07/25/20:33:00

This file embodies the implementation of the APS \LaTeX{} 4.1 document class for electronic submissions to journals.
The distribution point for this work is \url{http://publish.aps.org/revtex4/}, which contains fully unpacked, prebuilt runtime files and documentation.

Abbreviation: \texttt{revtex4-1}\n
\texttt{revtex4-1} is a family of \LaTeX{} document classes designed to facilitate the preparation of minimal, self-contained \LaTeX{} \document{}s for electronic submission to journals.

1 Using REV\TeX{}

The file \texttt{README} has retrieval and installation information.

User documentation is presented separately in \texttt{auguide.tex}.

The file \texttt{template.aps} is a boilerplate file.

1.1 Bill of Materials

Following is a list of the files in this distribution arranged according to provenance.

1.1.1 Primary Source

One single file generates all.

\verb|\%revtex4-1.dtx|

\%

1.1.2 Generated by \texttt{tex revtex4-1.dtx}

Typesetting this file under \TeX{} itself runs the installer, which generates the package files.

\verb|\%revtex4-1.cls, revtex4.ins, revtex4.drv, aps4-1.rtx,|
\verb|\%aps10pt4-1.rtx, aps11pt4-1.rtx, aps12pt4-1.rtx, revsymp.sty|
\%

1.1.3 Generated by \texttt{pdflatex revtex4-1.dtx}

Typesetting the source file under \LaTeX{} generates the documentation.

\verb|\%revtex4.pdf,|
\%

1.1.4 Auxiliary

The following are auxiliary files generated in the course of running $\LaTeX$:

```
%revtex4.aux revtex4.idx revtex4.ind revtex4.log revtex4.toc
```

2 Code common to all modules

The following may look a bit klootchy, but we want to require only one place in this file where the version number is stated, and we also want to ensure that the version number is embedded into every generated file.

Now we declare that these files can only be used with $\LaTeX 2\varepsilon$. An appropriate message is displayed if a different $\TeX$ format is used.

```
%<*doc|kernel|aps|rmp|revsymb>
\NeedsTeXFormat{LaTeX2e}[1996/12/01]%
%<kernel>\ProvidesClass{revtex4-1}
%<aps>\ProvidesFile{aps4-1}
%<rmp>\ProvidesFile{apsrmp4-1}
%<10pt>\ProvidesFile{aps10pt4-1}
%<11pt>\ProvidesFile{aps11pt4-1}
%<12pt>\ProvidesFile{aps12pt4-1}
%<revsymb>\ProvidesPackage{revsymb4-1}
%<*doc>
\ProvidesFile{revtex4-1.dtx}
%<kernel>\let\class@name\@gtempa
```

The current class name is remembered in $\class@name$. This is something of a klootch, relying as it does on knowledge of the implementation of $\ProvidesPackage$.

3 The driver module driver

This module, consisting of the present section, typesets the programmer’s documentation, generating the $\texttt{00readme.txt}$ and sample document as needed.

Because the only uncommented-out lines of code at the beginning of this file constitute the driver module itself, we can simply typeset the .dtx file directly, and there is thus rarely any need to generate the “driver” DOCSTRIP module. Module delimiters are nonetheless required so that this code does not find its way into the other modules.

The $\end{document}$ command concludes the typesetting run.
The driver uses packages \texttt{ltxdoc.sty}, \texttt{ltxdocext.sty}, \texttt{hyperref.sty}, and whatever font package has been selected.

\begin{verbatim}
\documentclass{ltxdoc}
\RequirePackage{ltxdocext}\%
\let\url\undefined
\RequirePackage[\colorlinks=true,linkcolor=blue]{hyperref}\
\expandafter\ifx\csname package@font\endcsname\@undefined\else
\expandafter\RequirePackage\expandafter{\csname package@font\endcsname}\%
\fi
\end{verbatim}

We ask for the usual indices and glossaries.

\begin{verbatim}
\CodelineIndex\EnableCrossrefs \% makeindex -s gind.ist revtex4
\RecordChanges \% makeindex -s gglo.ist -o revtex4.gls revtex4.glo
\end{verbatim}

3.0.5 Docstrip and info directives

We use so many \texttt{docstrip} modules that we set the \texttt{StandardModuleDepth} counter to 1.

\begin{verbatim}
\setcounter{StandardModuleDepth}{1}
\end{verbatim}

The following command retrieves the date and version information from this file.

\begin{verbatim}
\expandafter\GetFileInfo\expandafter{\jobname.dtx}\%
\end{verbatim}

3.1 The Frontmatter File

As promised above, here is the contents of the frontmatter file.

\begin{verbatim}
\begin{filecontents*}{00readme.tex}

145 \changes{4.1b}{2008/08/04}{Rag the right even more: \texttt{.8\hsize}. Also, assign \texttt{@totalleftmargin}}
146 \changes{4.1b}{2008/08/04}{The \texttt{rmp} journal substyle selects \texttt{groupedaddress} by default}
147 \changes{4.1b}{2008/08/04}{Use \texttt{setup@hook} to reinitialize all.}
148 \changes{4.1c}{2008/08/15}{Document class option longbibliography via \texttt{bibliography}}
149 \changes{4.1d}{2009/03/27}{Definition of \texttt{@fnsymbol} follows fixltx2e.sty}
150 \changes{4.1e}{2008/06/29}{(AO, 455) be nice to a list within the abstract}
Here is the document body, containing only a \DocInput directive—referring to this very file. This very cute self-reference is a common \ltxdoc idiom.

\begin{document}
\expandafter\DocInput\expandafter{\jobname.dtx}
\end{document}
4 Overview

REVTEX is a $\text{\LaTeX} 2e$ document class, somewhat like a hybrid of the standard $\text{\LaTeX}$ book and article classes.

Certain packages are (should be) loaded by this class in any case: amssymb, amsmath, bm, natbib.

Certain packages are automatically loaded by this class when a corresponding class option has been invoked:

- **REVTEX option** package
  - amsfonts
  - amssymb
  - aps
  - overcite

Certain other packages are to be loaded by the document through explicit use of \texttt{\usepackage}. Some mentioned in the user documentation are graphicx, longtable, hyperref, and bm.

Certain commonly used packages are known to be incompatible with REVTEX, among them multicol and cite. If such a package is found to be loaded, REVTEX issues an error message and halts the job. Halting might be considered severe punishment for loading an incompatible package, but if we were to proceed, an even weirder error might be encountered further down the road.

This document class implements the substyle: a set of mutually exclusive class options that, in this case, allow the document class to address multiple societies. It also implements a sub-substyle, giving the journal of the given society. Any society may create a substyle; this file generates one for aps.

FIXME: should always load the graphicx package. No, allow user to load whichever graphics package is desired.

QUERY: since amsfonts and amssymb extend syntax, why not load them in any case?

Certain processing occurs at the endgame for reading in REVTEX, thereby establishing precedence for assignments to $\text{\LaTeX}$’s (and REVTEX’s) parameters:

1. Figure out which society is operative and read in the indicated .rtx file.

2. Figure out which journal option is operative and execute the indicated journal command. This may lead to reading in a journal substyle .rtx file.

3. Figure out which pointsize is operative and execute the indicated pointsize command. This may lead to reading in a pointsize .rtx file.

4. Execute all of the document’s options, in the order declared within the document.
5. Read in all required packages (like natbib, amsfonts, amssymb), that were
determined by class, society, and journal.

6. The last required package, if existing, is the document’s style file, the .rty
file. Note that the .rty file can override the assignments of REVTeX, society,
journal, and required packages, and even load its own packages. It can also,
via appendations to \setup@hook, override the setup code itself.

7. Execute all of the setup code accumulated. Such code can be queued by
REVTeX itself, by the society, by the journal, or by the pointsize.

8. At this point, REVTeX has completed the process of inputting itself, and
LATEX will now execute the \AtEndOfClass procedures.

REVTeX will have enqueued code to execute at \AtBeginDocument time, in
two different queues. \document@inithook executes immediately upon encoun-
tering the \begindocument statement, \class@documenthook at the end of all
the code enqueued via \AtBeginDocument.

1. Install procedures to execute at the very end of the class’s \AtBeginDocument
processing, such as
   (a) closing out the page grid
   (b) putting out the LastPage label.
   (c) issuing a \bibliographystyle command, based on the value set by
       the society substyle.
   (d) setting default values for parameters used in the document. FIXME:
       differentiate between class’s parameters that can wait until they are
       used in the document, and parameters that are used at \AtBeginDocument
       time.

2. Install procedures to execute the very last at \AtEndDocument time, such as
   the \clearpage processing.

Certain events are optionally scheduled for \AtBeginDocument time:

1. Setting default values for the Booleans and for other procedures used in
   formatting.

2. In response to class options options, adjusting parameters and procedures
   used in formatting.

3. Implementing the eqsecnum option, if required.

4. Setting the state engine for data commands.

5. Memorizing procedures for later use.

6. Setting type size and area, for use by later calculations.
Certain events are scheduled for \end{document} time:

1. Print out the migrated floats or the end notes, if needed.
2. Close out the page grid.
3. Label the last page of the document
4. (\natbib) prepare to read in the .aux file.

5 Writing journal-specific extensions to \textsc{Revtex}

With this version of \textsc{revtex}, we introduce a somewhat different scheme for adapting \textsc{revtex} to the needs of a specific journal.

To create a journal substyle, you create new class options in \textsc{revtex} for the society, say \texttt{osa}, and any of that society’s journals, one of which is, say, \texttt{josaa}, using the code for the APS as a guide. In particular, each of your new options should separately define \texttt{@society} and \texttt{@journal}. That for the former will be the same for all options relating to a particular society.

Then, for the society, you create a corresponding .\texttt{rtx} file, in our case \texttt{osa.rtx}. Within that file, you override procedures and parameter assignments as you see fit. Ideally they will be generally applicable to all of that society’s journals (see the file \texttt{aps.rtx} for a realization of this scheme). Also within that file, you include a section of code for each journal, that for \texttt{josaa} looks like:

\begin{verbatim}
% \@ifx\@journal\journal@josaa{
\langle code specific to the josaa \rangle
% }{}
\end{verbatim}

Thus far, the scheme is similar to that used in \textsc{revtex} 3.1. However, the new scheme does differ from the old in that the .\texttt{rtx} file should define no syntactical extensions to \textsc{revtex}.

6 The \texttt{revtex4} Document Class

Above, we took advantage of 1) the \LaTeX{} definition of \texttt{\ProvidesPackage} and 2) that the line of code immediately afterwards follows the \texttt{\ProvidesClass} statement above.

6.1 Compatibility Processing

If the document has \documentstyle{revtex4}, then, instead of attempting to run in compatibility mode, just complain and exit.

7 Extensions to the \LaTeX Kernel

Here, we incorporate the utility, frontmatter, and page grid packages. The ltxutil, ltxfront, and ltxgrid source are distributed with REVTEX.

Here begins the options docstrip module.

7.1 Hooks

\setup@hook The procedure \setup@hook serves as the vehicle for all code that gives values to the class's parameters once all the society, journal, options, and packages have been processed.

Arrange for journal substyles to set their own default values.

After preamble processing is complete, detect whether package longtable has been loaded and patch it.

We override the caption processing method of the longtable package: space below the caption is created via strut instead of whitespace.
Robustify the `boldmath` command. If Team \LaTeX{} (or any package) ever gets around to fixing this problem, we will bow out. (This fix relates to bug \#394.)

\begin{verbatim}
\def\protectdef@boldmath{\
  \expandafter\ifnotrelax\csname boldmath \endcsname{}{\
    \class@info{Robustifying \string\LaTeX{}'s \string\boldmath\space command}\
    \expandafter\let\csname boldmath \endcsname\boldmath\
    \expandafter\def\expandafter\boldmath\expandafter{\expandafter\protect\csname boldmath \endcsname}\
  }\
  }\
\end{verbatim}

8 Compatibility with the geometry package

The `geometry` package of Hideo Umeki provides a way to specify the metrics of the media and page layout. We want to ensure that \REVTeX{} does not foreclose on the use of this or any other such package, nor to interfere with explicit assignments of such metric parameters within the document preamble.

The \LaTeX{} parameters (resp. \TeX{} primitives) set by \texttt{geometry} are: \texttt{\paperwidth}, \texttt{\paperheight}, \texttt{\textwidth}, \texttt{\textheight}, \texttt{\topmargin}, \texttt{\headheight}, \texttt{\headsep}, \texttt{\footskip}, \texttt{\skip\footins}, \texttt{\marginparwidth}, \texttt{\marginparsep}, \texttt{\oddsidemargin}, \texttt{\evensidemargin}, \texttt{\columnsep}, \texttt{\hoffset}, \texttt{\voffset}, \texttt{\mag}, \texttt{\if@twocolumn}, \texttt{\if@twoside}, \texttt{\if@mparswitch}, \texttt{\if@reversemargin},

\REVTeX{}'s assignments can be overridden by any package or other statement in the document preamble, so it should be compatible.

FIXME: one parameter is rendered semantically void (by \texttt{ltxgrid.dtx}): \texttt{\if@twocolumn}.

9 Options

9.1 Define Booleans Used in Options

The following Booleans are used within the document class to allow the document or the substyle to make selections of formatting. An explicit document class option
overrides an assignment made by a substyle.

9.2 Declare Options

9.2.1 Checkin: for Editorial Use

A document class option declaring that the document is being processed by the editorial staff.

This option should:

- put date in footer along with folio
- Have the effect of selecting the preprint class option.
- Have the effect of selecting the showpacs class option.
- specify that when a float is placed h or H, it will be allowed to break over pages. (Note: be sure that if the enclosed tabular has an optional argument, you change it to [v], or remove it entirely.)

\begin{verbatim}
\DeclareOption{checkin}{% 
  @booleantrue\dateinRH@sw 
  @booleantrue\preprintsty@sw 
  \def\@pointsize{12} %
  @booleantrue\showPACS@sw 
  @booleantrue\showKEYS@sw 
  \def\fp@proc@h{\allow@breaking@tables} %
  \def\fp@proc@H{\allow@breaking@tables} % 
}\% 
@booleanfalse\dateinRH@sw 
\def\checkindate{\dateinRH@sw{{\tiny\(\text{today}\)}}} %
\def\allow@breaking@tables{%
  \def\array@default{v}% tabular can break over pages
  @booleanfalse\floats@sw % table can break over pages
} %
\end{verbatim}

9.2.2 Preprint Style

\begin{verbatim}
\preprintsty@sw \textbf{The} boolean \texttt{\preprintsty@sw} signifies that the document is to be formatted in preprint style.
\end{verbatim}
If \showPACS\ is true, print the PACS information in the title block, otherwise not. Similarly for \showKEYS\ and the keywords.

9.2.3 Showing PACS and keywords

\DeclareOption{showpacs}{\@booleantrue\showPACS}
\DeclareOption{noshowpacs}{\@booleanfalse\showPACS}
\DeclareOption{showkeys}{\@booleantrue\showKEYS}
\DeclareOption{noshowkeys}{\@booleanfalse\showKEYS}
\@booleanfalse\showPACS
\@booleanfalse\showKEYS

9.2.4 Balance the last page when in two-column page grid

\balancelastpage\ If we are in a two-column page grid, we may wish to balance the columns of the last page. This will be done automatically if the twocolumn document class option is chosen. This action will be turned off by the nobalancelastpage. A complementary class option, balancelastpage is also provided.

\DeclareOption{balancelastpage}{\@booleantrue\balancelastpage}
\DeclareOption{nobalancelastpage}{\@booleanfalse\balancelastpage}
\@booleantrue\balancelastpage

9.2.5 Showing preprint numbers

\preprint\ The boolean \preprint\ signifies that the preprints (cf. \preprint) are to be formatted (usually on the title page). The option \preprintnumbers declares to do so, \nopreprintnumbers declares not to; the default is to follow \preprintsty.

\DeclareOption{nopreprintnumbers}{\@booleanfalse\preprint}
\DeclareOption{preprintnumbers}{\@booleantrue\preprint}
\appdef\setup@hook{\ifxundefined\preprint\let\preprint\preprintsty\}
9.2.6 Hypertext Option

The following code had been commented out, it is now truly a comment:
\%\AtEndOfClass{\begingroup
\edef\@tempa{\let\noexpand\@clsextension\noexpand\@empty
\noexpand\RequirePackage{hyperref}\def\noexpand\@clsextension{@clsextension}\
}}\expandafter\endgroup\@tempa
\def\@pointsize{10}

If you have a hyper-foo enabled browser you may prefer this format which does
not print the URL for the home page, but just makes the name a link, but by
default print it so it works on paper.
\class@warn{Class option "hyperref" is no longer supported.^^JEmploy \string\usepackage{hyperref} instead}

9.2.7 Type Size

Use \@pointsize=10 rather than \@ptsize=0 to allow easy extensions to 9pt or
whatever. Note: the three alternatives are mutually exclusive.

At this point, the parameter \@pointsize is set to \undefined: a society must
give it a definition.
\DeclareOption{10pt}{\def\@pointsize{10}}
\DeclareOption{11pt}{\def\@pointsize{11}}
\DeclareOption{12pt}{\def\@pointsize{12}}
\let\@pointsize\@undefined

9.2.8 Media Size

\paperheight
\paperwidth
\DeclareOption{a4paper}{%
\DeclareOption{b5paper}{%
  \setlength\paperheight {250mm}\
  \setlength\paperwidth {176mm}\
}%
\DeclareOption{letterpaper}{%
  \setlength\paperheight {11in}\
  \setlength\paperwidth {8.5in}\
}%
\DeclareOption{legalpaper}{%
  \setlength\paperheight {14in}\
  \setlength\paperwidth {8.5in}\
}%
\DeclareOption{executivepaper}{%
  \setlength\paperheight {10.5in}\
  \setlength\paperwidth {7.25in}\
}%
\DeclareOption{landscape}{%
  \setlength\@tempdima \paperheight\
  \setlength\paperheight \paperwidth\
  \setlength\paperwidth \@tempdima\
}%

Effectively select letterpaper.

\ds@letterpaper

9.2.9 Bibnotes

\frontmatter@footnote@produce

Frontmatter footnotes result from frontmatter commands like \email, \homepage, \altaffiliation, and \thanks. The default for \frontmatter@footnote@produce is \frontmatter@footnote@produce@footnote, which formats the frontmatter footnotes at the foot of the title page. The bibnotes class option defers them to the bibliography.

\DeclareOption{bibnotes}{\let\frontmatter@footnote@produce\frontmatter@footnote@produce@endnote}\
\DeclareOption{nobibnotes}{\let\frontmatter@footnote@produce\frontmatter@footnote@produce@footnote}\
\let\frontmatter@footnote@produce\frontmatter@footnote@produce@footnote
\appdef\class@enddocumenthook{\auto@bib}

9.2.10 Footinbib

\footinbib@sw

The boolean \footinbib@sw signifies that text footnotes are to be set in the bibliography, as endnotes.

The document may set the value one way or the other via the following two class options.

\DeclareOption{footinbib}{\@booleantrue\footinbib@sw}
\DeclareOption{nofootinbib}{\@booleanfalse\footinbib@sw}

The default value is \false@sw, and the society or journal may override the default.
9.2.11 altaffilletter

\altaffilletter@sw

Determine the procedure \texttt{\thefootnote} used in frontmatter: the footnote symbol used in titlepage footnotes.

\begin{verbatim}
\DeclareOption{altaffilletter}{\@booleantrue\altaffilletter@sw}\
\DeclareOption{altaffilsymbol}{\@booleanfalse\altaffilletter@sw}\
\@booleanfalse\altaffilletter@sw
\end{verbatim}

9.2.12 superbib

\begin{verbatim}
\place@bibnumber
\end{verbatim}

The procedure \texttt{\place@bibnumber} produces the number at the head of the \texttt{\bibitem}, in the bibliography. By default, it has the \texttt{\bibnumfmt} meaning assigned by the \texttt{natbib} package. It may be overridden by society, journal, or by the document options.

\begin{verbatim}
\DeclareOption{superbib}{%\
\let\place@bibnumber\place@bibnumber@sup\
}\def\place@bibnumber{\NATx@bibnumfmt}\
\end{verbatim}

For producing the \texttt{\bibitem} device, we define two procedures to select from. Note that we could have used \texttt{natbib}'s \texttt{\ifNAT@super} switch, but it does not allow for altering the meaning of \texttt{\bibnumfmt}.

\begin{verbatim}
\def\place@bibnumber@sup#1{\textsuperscript{#1}}\
\def\place@bibnumber@inl#1{[#1]}\
\end{verbatim}

9.2.13 citeautoscript

\begin{verbatim}
\citeautoscript@sw
\end{verbatim}

This class option allows you to automatically accomodate a change from non-superscripted, numbered references to superscripted, numbered references.

Note: you should always mark up your document with the assumption that references are \textit{not} going to be superscripted. Otherwise this option has no hope of working properly.

\begin{verbatim}
\DeclareOption{citeautoscript}{\@booleantrue\citeautoscript@sw}\
\@booleanfalse\citeautoscript@sw
\end{verbatim}

9.2.14 Variants on the Bibliography Style

\texttt{REVTeX} anticipates that a society or journal will provide two related Bib\TeX bibliography style variants, designating one as the default. A pair of document class options \texttt{longbibliography} and \texttt{nolongbibliography} allows the user to explicitly select between them.

\begin{verbatim}
\longbibliography@sw
\end{verbatim}

\texttt{REVTeX}'s default for \texttt{\longbibliography@sw} is \texttt{\false@sw}.

\begin{verbatim}
\DeclareOption{longbibliography}{\@booleantrue\longbibliography@sw}\
\DeclareOption{nolongbibliography}{\@booleanfalse\longbibliography@sw}\
\@booleanfalse\longbibliography@sw
\end{verbatim}
The document class options `eprint` and `noeprint` give the user the ability to turn off production of the `eprint` field in the bibliography.

\DeclaresOption{eprint}{\@booleantrue\eprint@enable@sw}%
\DeclaresOption{noeprint}{\@booleanfalse\eprint@enable@sw}%
\@booleantrue\eprint@enable@sw

\subsection*{9.2.15 Simplex/Duplex Pages}

The flag `twoside` signifies that the document is to be formatted for duplex printing. After the preamble is processed, we align the value of the kernel `\if\twoside` to that of `\twoside`. `\if\twoside` itself is used in the kernel's `\cleardoublepage` and `\@outputpage` procedures.

\DeclareOption{twoside}{\@booleantrue\twoside@sw\@mparswitchfalse}%
\DeclareOption{oneside}{\@booleanfalse\twoside@sw\@mparswitchtrue}%

The complementary options `twoside` and `oneside` assert formatting for duplex or simplex printing, respectively. At the same time, we arrange for the selection of the page grid with respect to the marginal column: Because `\if\reversemargin` remains default (false), if duplex printing, this column will always be on the (right), if simplex printing, it will always be on the (outside). Query: correct choice? `FIXME`: assign `\if\mparswitch` later (and protect the assignment, too).

\DeclareOption{twoside}{\@booleantrue\twoside@sw\@mparswitchfalse}%
\DeclareOption{oneside}{\@booleanfalse\twoside@sw\@mparswitchtrue}%

\subsection*{9.2.16 Two-Column Page Grid}

The flag `twocolumn` signifies that the document is to be formatted in the two-column page grid.

If no options relating to page grid are invoked by `\AtBeginDocument` time, we set default values. Up to that point, the class can check if `\twocolumn` is `\undefined` to see if any related options have been invoked.

`onecolumn` specifies one-column page grid. The `twocolumn` class option employs the standard mechanism for changing the column grid: the `ltxgrid` package.

\DeclareOption{onecolumn}{\@booleanfalse\twocolumn@sw}%
\DeclareOption{twocolumn}{\@booleantrue\twocolumn@sw}%
\@booleanfalse\twocolumn@sw

The column grid is determined by the state of the switch `\twocolumn` and is effected at `\class@documenthook` time. The society or journal file may re-define `\select@column@grid` to accommodate, e.g., more than two choices for the page grid.

Note that `\open@column@two` adds items to the Main Vertical List, so constitutes the true beginning of the document.

Note also that if the selected column grid is a one-column grid, there is nothing to do, because `ltxgrid` has already set that up via `\@begindocumenthook`.

\def\select@column@grid{%
We install into \texttt{\textbackslash class@enddocumenthook} a trap for the procedure \texttt{\textbackslash clearpage} that attempts to end the current page. This procedure needs to be headpatched with \texttt{\textbackslash close@column} to end the current page grid. This procedure is executed after all typesetting is complete i.e., after items like \texttt{\textbackslash printtables}, as well as all commands queued up by \texttt{\textbackslash AtEndDocument}.

The boolean \texttt{\textbackslash authoryear@sw} signifies that we are to use author-year citations rather than numerical citations. The \texttt{\textbackslash author-year} class option selects “author-year” citations; \texttt{\textbackslash numerical} selects “numerical” citations. The former is the default.

The boolean \texttt{\textbackslash galley@sw} signifies that the document is to be formatted in galley style. Asserting both \texttt{\textbackslash galley@sw} and \texttt{\textbackslash preprintsty@sw} may produce strange formatting results, but it is not illegal. However, it is illegal to assert galley and any twocolumn option.

galley emulates setting the galleys of a two-column journal. CHANGED: this option should effectively set \texttt{\textbackslash preprintsty@sw} false. NOTE: it makes no sense to assert both galley and twocolumn.
9.2.17 raggedbottom or flushbottom

The class options `raggedbottom` and `flushbottom` determine whether the columns (page) are ragged bottom or flush bottom. Note that we do not select a default here; that is done by the journal substyle.

\begin{verbatim}
\DeclareOption{raggedbottom}{\@booleantrue\raggedcolumn@sw}
\DeclareOption{flushbottom}{\@booleanfalse\raggedcolumn@sw}
\@booleanfalse\raggedcolumn@sw
\appdef\setup@hook{%
\raggedcolumn@sw{\raggedbottom}{\flushbottom}%
}
\end{verbatim}

9.2.18 tightenlines

This class option specifies that standard leading is to be used to set the type. If lacking, the leading will be loose.

\begin{verbatim}
\DeclareOption{tightenlines}{\@booleantrue\tightenlines@sw}
\@booleanfalse\tightenlines@sw
\end{verbatim}

9.2.19 lengthcheck

The flag `lengthcheck@sw` signifies that the length checking is in effect. It is up to the individual journal substyle to alter its formatting accordingly.

\begin{verbatim}
\DeclareOption{lengthcheck}{\@booleantrue\lengthcheck@sw}
\@booleanfalse\lengthcheck@sw
\ExecuteOptions{reprint}
\end{verbatim}

FIXME: society or journal may have its own definition of this option.
In addition, if length checking is in effect, we will enable the tally of text length.
\begin{verbatim}
\appdef\setup@hook{%
\lengthcheck@sw{\@booleantrue\tally@box@size@sw}{}%
}%
\end{verbatim}

9.2.20 Draft and Final
\texttt{\textbackslash draft@sw} The flag \texttt{\textbackslash draft@sw} signifies that the document is to be formatted in draft mode.
\begin{verbatim}
\appdef\setup@hook{%
\draft@sw{\overfullrule 5\p@}{\overfullrule\z@}{}
}%
\end{verbatim}

Certain packages may pay attention to the class option \texttt{draft} that sets this Boolean.
\begin{verbatim}
\DeclareOption{draft}{\@booleantrue\draft@sw}
\@booleanfalse\draft@sw
\end{verbatim}

9.2.21 eqsecnum
\texttt{\textbackslash eqsecnum@sw} The flag \texttt{\textbackslash eqsecnum@sw} signifies that equations are to be numbered with the section, e.g., “Eq. (2.13)”.
\begin{verbatim}
\appdef\setup@hook{%
\eqsecnum@sw{%\@addtoreset{equation}{section}\
\def\theequation@prefix{\arabic{section}.}\\%
}{%}
}%
\end{verbatim}

The \texttt{eqsecnum} class option signifies that equations are to be numbered within sections.
\begin{verbatim}
\DeclareOption{eqsecnum}{\@booleantrue\eqsecnum@sw}
\@booleanfalse\eqsecnum@sw
\end{verbatim}

9.2.22 secnumarabic
The \texttt{secnumarabic} class option signifies that sectioning commands are to be numbered arabic: the procedure \texttt{\secnums@arabic} is executed as the default. Otherwise, the procedure \texttt{\secnums@rtx} determines things. The society or journal may redefine either procedure, and may change the definition of \texttt{\setup@secnums} itself, thereby establishing a different default.
\begin{verbatim}
\appdef\setup@hook{%
\setup@secnums
\}%
\end{verbatim}
\begin{verbatim}
\\setup@secnums
\@booleanfalse\secnumarabic
\@booleantrue\secnumarabic
\%\def\setup@secnums{\secnums@arabic}
\end{verbatim}
The code that defines \texttt{secnums@rtx} and \texttt{secnums@arabic} appears in Section 14.4.

\texttt{fleqn}  FIXME: model fleqn after amsfonts. I no longer understand why I said this. \texttt{fleqn.clo} is not a package, so it can simply be \texttt{input}.

\begin{verbatim}
447 \DeclareOption{fleqn}{%
448 \input{fleqn.clo}%
449 }%
\end{verbatim}

\texttt{9.2.23 floats/endfloats}

\texttt{\floats@sw} The Boolean \texttt{\floats@sw} signifies that floats are to be floated; if false, that floats are to be deferred to the end of the document. By default, the former. Note that the state of this Boolean is to be changed by the document class in response to user-selected options.

This boolean and the assignment of its default value is done by the \texttt{ltxutil} package.

The Boolean \texttt{\floatp@sw} signifies that endfloats are to be set one per page; if false, that endfloats are to be set with multiple floats per page permitted. By default, the latter. Note that the state of this Boolean is to be changed by the document class in response to user-selected options. The default is established here.

These options control, via the Boolean \texttt{\floats@sw}, whether floats are to be migrated to the end of the document.

\begin{verbatim}
450 \DeclareOption{floats}{\@booleantrue\floats@sw\@booleanfalse\floatp@sw}
451 \DeclareOption{endfloats}{\@booleanfalse\floats@sw\@booleanfalse\floatp@sw}
452 \DeclareOption{endfloats*}{\@booleanfalse\floats@sw\@booleantrue\floatp@sw}
453 \@booleantrue\floats@sw
454 \@booleantrue\floatp@sw
\end{verbatim}

\texttt{9.2.24 titlepage/notitlepage}

These options control, via \texttt{\titlepage@sw}, whether the title block is to be set on a separate page.

\texttt{\titlepage@sw} The flag \texttt{\titlepage@sw} signifies that a forced page break is to follow the title page: the article title appears on a page by itself.

\begin{verbatim}
455 \DeclareOption{titlepage}{\@booleantrue\titlepage@sw}
456 \DeclareOption{notitlepage}{\@booleanfalse\titlepage@sw}
457 \@booleanfalse\titlepage@sw
\end{verbatim}

\texttt{9.2.25 Substyle and Sub-substyle}

\texttt{\change@society} \texttt{\change@journal} If the society or, resp., journal has already been assigned, notify user whether it is being overridden.

\begin{verbatim}
458 \def\change@society#1{%
459 \def\@tempa(#1)%
\end{verbatim}

25
Here had been the class options relating to the APS. Now that all societies are on an equal footing, this code is in the respective \rtx file.

9.2.26 Optical Society of America

Here are the class options relating to the Optical Society of America.

Note: as of 2008, the only OSA module being distributed by ctan is osajnl.rtx. The class options declared here are, I think, unused.

\rtx@require@packages

The procedure \rtx@require@packages accumulates all \RequirePackage statements in the course of loading the document class. Carrying out these operations at that time is needed: \ProcessOptions must be executed first.

\appdef\rtx@require@packages{\empty}

We load the textcase package of David Carlisle. Now that its bug of long standing has been repaired, we no longer need to doctor it up. And, because its loading has been deferred until \rtx@require@packages time, we no longer override \LaTeX here. Instead, the textcase package will be asked to do that.

\MakeUppercase
\MakeLowercase

The following code used to let the textcase commands override those of \LaTeX:
\%\appdef\setup@hook{%
\%\expandafter
\%\let\csname MakeUppercase \expandafter\endcsname
\%\csname MakeTextUppercase \endcsname
\%\expandafter
\%\let\csname MakeLowercase \expandafter\endcsname
\%\csname MakeTextLowercase \endcsname
\%\}%
%

\textbf{amsfonts} The class option \texttt{amsfonts} has the same effect as if the document preamble contained a \texttt{\usepackage{amsfonts}} statement.

\texttt{\DeclareOption{amsfonts}{%}
\texttt{\def\class@amsfonts{\RequirePackage{amsfonts}}}%}

\texttt{\DeclareOption{noamsfonts}{%}
\texttt{\let\class@amsfonts\@empty}}%

\appdef\rtx@require@packages{%
\%\@ifxundefined\class@amsfonts{}{\class@amsfonts}%
}

\textbf{amssymb} The class option \texttt{amssymb} has the same effect as if the document preamble contained a \texttt{\usepackage{amssymb}} statement.

\texttt{\DeclareOption{amssymb}{%}
\texttt{\def\class@amssymb{\RequirePackage{amssymb}}}%}

\texttt{\DeclareOption{noamssymb}{%}
\texttt{\let\class@amssymb\@empty}}%

\appdef\rtx@require@packages{%
\%\@ifxundefined\class@amssymb{}{\class@amssymb}%
}

\textbf{amsmath} The class option \texttt{amsmath} has the same effect as if the document preamble contained a \texttt{\usepackage{amsmath}} statement.

We require version 1.2 (datestamped 1997/03/20) or later. The \texttt{\verbatim{\ver@amsmath.sty}},

\LaTeX\ note: Certain \LaTeX\ procedures have an arbitrary and pointless restriction that they may be used only within the preamble. We get around this by preserving the procedures in private \texttt{\csname names\texttt{}}.

\FIXME\ note: it is difficult to ensure that an error summary will be printed on the console at the very end, but \texttt{\verbatim{ltxgrid}} allows accomplishing this via an interrupt, put down at \texttt{\verbatim{\AtEndDocument}} time.

\texttt{\DeclareOption{amsmath}{%}
\texttt{\def\class@amsmath{\RequirePackage{amsmath}[\ver@amsmath@prefer]}}}%

\texttt{\DeclareOption{noamsmath}{%}
9.2.27 Presenting Authors and Their Affiliations

Class options for presenting authors and their affiliations are now defined in \texttt{ltxfront.dtx}.
9.2.28 Typeset by REVTEX

\byrevertex\sw

The flag \byrevertex\sw signifies that the document should bear an imprint to the effect that it was formatted by this document class.

The class option byrevertex signifies that you want the “Typeset by REVTEX” byline to appear on your formatted output. By default, no such byline appears.

\DeclareOption{byrevertex}{\@booleantrue\byrevertex\sw}%
\@booleanfalse\byrevertex\sw

9.3 Attempt to fix float placement failure

\force\defeclist\sw

REVTEX uses the ltxgrid package, which provides the ability to attempt repairs when \LaTeX{}’s float placement mechanism is about to fail, but that facility is turned off by default. Users should invoke the floatfix document class option to enable this \LaTeX{} extension. If not, a helpful message is printed in the log, indicating how to work around the difficulty.

\DeclareOption{floatfix}{\@booleantrue\force\defeclist\sw}%
\DeclareOption{nofloatfix}{\@booleanfalse\force\defeclist\sw}%
\@booleanfalse\force\defeclist\sw

\@fltovf\@fltstk

The \LaTeX{} kernel error message \@fltovf may now be a bit more helpful to the user; likewise for the \@fltstk message of ltxgrid.

\gdef\@fltovf{%
\latexerror{%
Too many unprocessed floats%
\force\defeclist\sw{}{; try class option [floatfix]}%
}\@ehb%
%
\gdef\@fltstk{%
\latexwarning{%
A float is stuck (cannot be placed)%
\force\defeclist\sw{}{; try class option [floatfix]}%
%}
%
}
%

\ltxgridinfo\sw
\outputdebug\sw

The two options ltxgridinfo and outputdebug turn on informative diagnostics within the package ltxgrid. Only people who really want to see this output will select these class options. Consult documentation for the ltxgrid package to see what output the related switches enable.

\DeclareOption{ltxgridinfo}{%%
\@booleantrue\ltxgridinfo\sw
%}
\DeclareOption{outputdebug}{%%
\@booleantrue\outputdebug\sw
\@booleantrue\ltxgridinfo\sw
\traceoutput%
%}
9.4 Option to relax page height

\textwidth@sw

The ltxgrid package can set text pages to their natural height or force them to the full text height; the latter is the default. If setting the pages with a variable length, the running foot will move up or down with the natural length of the text column. While I recommend against doing so, this option will turn that switch to the latter setting.

\begin{verbatim}
579 \DeclareOption{raggedfooter}{\@booleanfalse\textwidth@sw}\
580 \DeclareOption{noraggedfooter}{\@booleantrue\textwidth@sw}\
\end{verbatim}

9.5 Selecting procedure for processing abstract

Code defining options newabstract and oldabstract has been removed.

9.6 Option to turn on diagnostics in the frontmatter

\frontmatterverbose@sw

A diagnostic option, not for the average end user, which reveals the workings of the frontmatter. This code interfaces to that of ltxfront.dtx.

\begin{verbatim}
581 \DeclareOption{frontmatterverbose}{\@booleantrue\frontmatterverbose@sw}\
582 \@booleanfalse\frontmatterverbose@sw
\end{verbatim}

\linenumbers@sw

An option to number the lines of text in the output in the manner of lineno.

At present, we use that very package to implement this functionality. This means that users may modify the workings of that package per its documentation (which see).

However, compatibility with amsmath requires that lineno be loaded afterwards. Therefore, we defer loading of this package until after the preamble is completed.

\begin{verbatim}
583 \DeclareOption{linenumbers}{% 
584 \appdef 
585 \class@documenthook{% 
586 \RequirePackage{lineno}[2005/11/02 v4.41]% 
587 \linenumbersep4pt\relax 
588 \linenumbers\relax 
589 )% 
590 )%  
591 )% 
592 )% 
593 )% 
594 )% 
595 )% 
\end{verbatim}

By default, line numbering is off.

\NAT@merge

Add class option nomerge, to turn off natbib 8.3 syntax for citation key. The default value of REVTeX 4.1 for \NAT@merge is \thr@@, which turns on the new syntax along with its semantics. Legacy documents that would be incompatible with the new syntax can be successfully processed with class option nomerge.

\begin{verbatim}
591 \DeclareOption{nomerge}{% 
592 \appdef\setup@hook{% 
593 \ifnum[\NAT@merge]\z@\{\let\NAT@merge\z@\}% 
594 )% 
595 )% 
\end{verbatim}

30
9.7 Default Option, Society, Journal, and fontsize

This change will not break OSA documents because that society is still built in to revtex4.

The procedure `@parse@class@options@society` parses the options passed to this document class for the `@society`. It is like `@ProcessOptions*` in that it accesses `@optionlist{@currname.@current}`. Any undefined option is considered: if there is a corresponding .rtx file, it will change the society accordingly and define a placeholder class option for the society thus found (thus preventing a spurious "option not found" message).

The procedure `@parse@class@options@journal` parses the document’s options for any that set the `@csname` provided.

\begin{verbatim}
\def\@parse@class@options@society{%
  \edef\@tempa{\@optionlist{@currname.@current}}%
  \expandafter\@for\expandafter\CurrentOption\expandafter:=\@tempa\do{%}
    \expandafter\@ifnotrelax\csname ds@\CurrentOption\endcsname{}{%
      \IfFileExists{\CurrentOption\substyle@post.@substyle@ext}{%
        \expandafter\change@society\expandafter{\CurrentOption}%
        \expandafter\let\csname ds@\CurrentOption\endcsname\@empty
      }{}}%
  }%
}
\def\@parse@class@options@#1{%
  \edef\@tempa{\@optionlist{@currname.@current}}%
  \expandafter\@for\expandafter\CurrentOption\expandafter:=\@tempa\do{%}
    \expandafter\@ifnotrelax\csname ds@\CurrentOption\endcsname{%
      \begingroup\csname ds@\CurrentOption\endcsname
        \@ifxundefined#1{%
          \endgroup
        }{%
          \expandafter\endgroup\expandafter\def\expandafter#1\expandafter{#1}
        }%
    }%
  }%
}
\def\@parse@class@options@journal{%
  \edef\@tempa{\@optionlist{@currname.@current}}%
  \expandafter\@for\expandafter\CurrentOption\expandafter:=\@tempa\do{%}
    \expandafter\@ifnotrelax\csname ds@\CurrentOption\endcsname{%
      \begingroup\csname ds@\CurrentOption\endcsname
        \@ifxundefined@journal{%
          \endgroup
        }{%
          \expandafter\endgroup\expandafter\def\expandafter@journal\expandafter{@journal}
        }%
    }%
  }%
}\end{verbatim}

31
The class option `hypertext` enables the built-in hypertext capabilities, which coincide with those of custom-bib-generated BIBTeX styles using the guard code `hypertext`.

Note that APS has these capabilities turned off by default; Loading the hyperref package turns them on.

The default handling for a document class option depends upon whether the \texttt{@society} is defined.

If not, then hunt for a \texttt{.rtx} file with that name. If it exists, then we will take this option as the name of the society, otherwise, declare the option as not used.

(This behavior is similar to the \LaTeX\ handling, where one looked for a \texttt{.sty} file, except that in this case, we must provide for journal substyles that may be defined in the society file, or have their own journal substyle file.)

At the point where the class file is finished loading, we then read in the society file. That file can define further class options, such as the journal substyle.

For users, this will mean that they can specify the society and journal simply by specifying first the former and then the latter among their document class options. The society must have a corresponding \texttt{.rtx}.

```latex
\%\</options>
\%\</package>
```
A society substyle may define its own options, via `\DeclareOption`.

At the end of this document class, we process the society file, using `aps.rtx` if none has been specified in the document.

\begin{verbatim}
def\@process@society#1{\%
  \@ifxundefined\@society{\%
    \class@warn{No Society specified, using default society #1}\%
    \def\@society{#1}\let\@journal\@undefined
  }{}\%
  \expandafter\input\expandafter{\@society\substyle@post.\substyle@ext}\%
}\%

A society substyle can encompass any number of journal substyles; we use the following procedure to invoke the proper one.
\end{verbatim}

\begin{verbatim}
def\@process@journal#1{\%
  \@ifxundefined\@journal{\%
    \class@warn{No journal specified, using default #1}\%
    \def\@journal{#1}\%
  }{}\%
  \expandafter\expandafter\expandafter\rtx@do@substyle\expandafter\expandafter\expandafter{\expandafter\@society\@journal}\%
}\%

def\rtx@do@substyle#1{\%
  \InputIfFileExists{#1\substyle@post.\substyle@ext}{}{\csname rtx@#1\endcsname}\%
}\%
\end{verbatim}

Document class options 10pt, 11pt, and 12pt are implemented by \LaTeX itself and determine `\@pointsize`. These provide formatting settings appropriate to the society’s journals.

If not specified by the document, a value `\@pointsize@default` is used. This default can be set by the journal. Here, the society sets its default.

\begin{verbatim}
def\@process@pointsize#1{\%
  \@ifxundefined\@pointsize{\%
    \def\@pointsize{#1}\%
    \class@warn{No type size specified, using default \@pointsize}\%
  }{}\%
  \expandafter\expandafter\expandafter\rtx@do@substyle\expandafter\expandafter\expandafter{\expandafter\@society\@pointsize pt}\%
}\%
\end{verbatim}

### 9.8 Class-Asserted Options

Here we establish the default document class options. Those of the document itself will override these.
10 Procedures Dependent Upon Options

Here we introduce \texttt{classes.dtx} definitions for the page styles that people will expect to be able to use.

\begin{verbatim}
\def\ps@headings{
  \let\@oddfoot\@empty \let\@evenfoot\@empty
  \def\@evenhead{\thepage\hfil\slshape\leftmark}\
  \def\@oddhead{{\slshape\rightmark}\hfil\thepage}\
  \let\@mkboth\markboth
  \def\sectionmark##1{
    \markboth {{\MakeUppercase{\ifnum \c@secnumdepth >\z@ \thesection\quad ##1}}}{}}\
  \def\subsectionmark##1{
    \markright {{\ifnum \c@secnumdepth >\@ne \thesubsection\quad ##1}}}\
  \def\ps@myheadings{
    \let\@oddfoot\@empty \let\@evenfoot\@empty
    \def\@evenhead{\thepage\hfil\slshape\leftmark}\
    \def\@oddhead{{\slshape\rightmark}\hfil\thepage}\
    \let\@mkboth\@gobbletwo
    \let\sectionmark\@gobble
    \let\subsectionmark\@gobble
  }\
\end{verbatim}

\begin{verbatim}
\def\ps@article{\ps@article@final\
  \def\@evenhead{\let\heading@cr\thepage\checkindate\hfil\slshape\leftmark}\

\def\@evenhead{\thepage\hfil\slshape\leftmark}\
\def\@oddhead{{\slshape\rightmark}\hfil\thepage}\
\let\@mkboth\markboth
\end{verbatim}

34
Support the default meaning of \@endpage. Name of this macro (and the \label key) taken from CTAN:/macros/latex/contrib/other/lastpage with code optimised slightly.

Install a procedure into document endgame processing that labels the last page of the document. This is done just before the .aux file is closed, and does not require a \shipout, because it writes directly to the .aux file. Note that we assume no further \shipouts will be done past this point.
11 Required Packages

CTAN:macros/latex/contrib/other/misc/url.sty

12 Incompatible Packages

We wait until after the preamble is processed, then check for any packages that might have been loaded which we know to be incompatible with REVTEx.

The multicol package is incompatible with ltxgrid, which replaces it. The cite package is incompatible with natbib, which replaces its functionality. The functionality of the mcite package is provided by natbib.

13 Society- and Journal-Specific Code

\@journal Journal test helper, used as

%\@ifx{\@journal\journal@pra}{%
  \%  ⟨journal-specific setup⟩
%\}@fi
%

Journal code might like to further specify (if as yet undefined) or distinguish on the following Booleans.

Note: the journal substyle code should only alter the value of one of these Booleans if the Boolean is \texttt{undefined}. This convention is what makes the document’s options take precedence over the values set by the journal.

\texttt{FIXME}: make this table an exhaustive listing of all the parameters set by the class options.
14 Body

14.1 counters

The following definitions are probably identical to those in \texttt{classes.dtx}

\verbatim
782 \def\labelenumi{\theenumi.}
783 \def\theenumi{\arabic{enumi}}
784 \def\labelenumii{\textup{\textsection}\ \textup{\textsection}\ theenumii}}
785 \def\theenumii{\textup{\textsection}\ \textup{\textsection}\ alph{enumii}}}\def\p@enumii{\theenumi(\theenumii)}
787 \def\labelenumiii{\theenumiii.}
788 \def\theenumiii{\textup{roman{enumiii}}}\def\p@enumiii{\theenumi(\theenumii)}
789 \def\labelenumiv{\theenumiv.}
790 \def\theenumiv{\textup{roman{enumiv}}}\def\p@enumiv{\theenumi(\theenumii)}
791 \def\labelenumiv{\textup{roman{enumiv}}}
\endverbatim
14.2 float parameters

from the old aps.sty. (DPC: same as article I think) AO: here, \LaTeX{}'s standard classes fail very poorly (the price of backward compatibility): the values for \texttt{\floatpagefraction} and \texttt{\dblfloatpagefraction} need to be raised to avoid creating extremely short float pages.

\setcounter{topnumber}{2}
\def\topfraction{.9}
\setcounter{bottomnumber}{1}
\def\bottomfraction{.9}
\setcounter{totalnumber}{3}
\def\textfraction{.1}
\def\floatpagefraction{.9}
\setcounter{dbltopnumber}{2}
\def\dbltopfraction{.9}
\def\dblfloatpagefraction{.9}

14.3 List Environments

\newenvironment{verse}{%\let\\c@centercr
\list{}{\itemsep\z@ \itemindent -1.5em \listparindent \itemindent
\rightmargin\leftmargin\advance\leftmargin 1.5em}
\item[]}{%}
\endlist

\newenvironment{quotation}{%\list{}{\listparindent 1.5em \itemindent \listparindent \rightmargin\leftmargin \parsep \z@ \parskip\z@ plus\p@}
\item[]}{%}
\endlist

\newenvironment{quote}{%\list{}{\rightmargin\leftmargin}
\item[]}{%}
\endlist
The following counters are defined by LaTeX's standard document classes. We do likewise, then assign flag values to the productions, awaiting overrides.

\newcounter{part} \let\thepart@undefined \newcounter{section} \let\thesection@undefined \newcounter{subsection}[section]\let\thesubsection@undefined \newcounter{subsubsection}[subsection]\let\thesubsubsection@undefined \newcounter{paragraph}[subsubsection]\let\theparagraph@undefined \newcounter{subparagraph}[paragraph]\let\thesubparagraph@undefined

The procedure invoked by \setup@secnums provides meanings for these productions.

These two procedures define the meanings of each of the productions of the counters of the sectioning commands, but only if nothing else has defined it.
This user-level markup produces a head introducing the acknowledgments, and acts as a wrapper for the text. In this implementation, it is an unnumbered section, but appears within the toc.

For compatibility’s sake, we implement it under the alternative spelling acknowledgements.
14.4.3 Part Opener

section setup copied verbatim from revtex3 aps/osa. Does not explicitly depend on pointsize options.
14.4.4 Stacked Heads

Here are the class default definitions for sectioning commands. A society or a journal substyle will likely override these definitions.

In doing so, you can customize the formatting for a particular level by defining, e.g., \hangfrom@section or \@subsectioncntformat.

\def\section{%}
\@startsection
{section}{1}{\z@}{0.8cm \plus1ex \minus .2ex}{0.5cm}{\normalfont\small\bfseries}%
\def\subsection{%
\@startsection
{subsection}{2}{\z@}{.8cm \plus1ex \minus .2ex}{.5cm}{\normalfont\small\bfseries}%
\def\subsubsection{%
\@startsection
{subsubsection}{3}{\z@}{.8cm \plus1ex \minus .2ex}{.5cm}{\normalfont\small\itshape}%

14.4.5 Runin Heads

\def\paragraph{%}
\@startsection
{paragraph}{4}{\parindent}{\z@}{-1em}{\normalfont\normalsize\itshape}%

\def\theequation{% 
theequation @prefix \arabic{equation} %
\def\theequation@prefix{} %
}

14.5 Math
\theequation We change the production of the equation counter so that we can accomodate the eqsecnum option.
\def\theequation{% 
theequation @prefix \arabic{equation} %
\def\theequation@prefix{} %
}

\thefigure
The figure counter and float placement defaults.
\newcounter{figure}
\renewcommand \thefigure {\@arabic\c@figure}
Note that we give the ‘!’ modifier by default. This is an effort to avoid the
syndrome wherein a deferred float finds itself unqualified for placement, thereby
getting carried until \clearpage.
\fps@figure{tbp}
\ftype@figure{1}
\ext@figure{lof}
\fnum@figure{\figurename~\thefigure}
We allocate a box register for use in tallying the column inches of floats of this
type.
\expandafter\newbox\csname fbox@\ftype@figure\endcsname
\expandafter\setbox\csname fbox@\ftype@figure\endcsname\hbox{}

14.8.1 Deferring figure Floats
We determine if figures are to float or be deferred until \printfigures time. If
so, we open the stream that will receive the deferred document portions.
\appdef\class@documenthook{%
\do@if@floats{figure}{.fgx}%
}%
\appdef\class@enddocumenthook{%
\printfigures\relax
}%
\printfigures
The user-level command \printfigures determines where the figures are to ap-
ppear in a document in which \floats@sw is false. If the user invokes the endfloats
class option and fails to insert a \printfigures command, the figures will be
printed at the end of the document. If the command is given, but floats are not
being deferred, it amounts to a no-op.
\newcommand\printfigures{%
\@ifstar{\true@sw}{\floatp@sw{\true@sw}{\false@sw}}%
}%
\class@enddocumenthook{%
\printfigures\relax
}%
We patch into the procedure \@xfloat@prep. This patch applies to all floats (not figure alone) and makes the type center.

\appdef\@xfloat@prep{%
  \appdef\@parboxrestore{\centering}%
  \let\@makefnmark\@makefnmark@latex%
%
14.9 Tables

DPC: More or less taken from revtex2 aps.sty, but using dcolumn for decimal alignment.

\table We define the table environment. Later, we will horse around with its meaning in order to accommodate \floats@sw.

\newenvironment{table}{\@float{table}}{\end@float}

\newenvironment{table*}{\@dblfloat{table}}{\end@dblfloat}

\thetable Table counter and default float placement declarations.

\newcounter{table}
\renewcommand\thetable{\@Roman\c@table}

Note that we give the ‘!’ modifier by default. This is an effort to avoid the syndrome wherein a deferred float finds itself unqualified for placement, thereby getting carried until \clearpage.

\def\fps@table{tbp}
\def\ftype@table{2}
\def\ext@table{lot}
\def\fnum@table{\tablename~\thetable}

We allocate a box register for use in tallying the column inches of floats of this type.

\expandafter\newbox\csname fbox@\ftype@table\endcsname
\expandafter\setbox\csname fbox@\ftype@table\endcsname\hbox{}

\def\listoftables{\print@toc{lot}}%
\let\l@table\l@figure

\table@hook Assign a meaning to the hook installed into float processing.

\squeezetable By default floats are \small. The \squeezetable declaration makes them smaller (\scriptsize). In general you can locally redefine \table@hook to be whatever you like. (DPC: \Huge\color{magenta}...?)

\def\table@hook{\small}%
\def\squeezetable{\def\table@hook{\scriptsize}}%
\appdef\@floatboxreset{\table@hook}%
14.9.1 Deferring table Floats

After all packages are loaded, we decide if tables will float or will be deferred until \texttt{\textbackslash printtables} time.

We also deal with the possibility of \texttt{longtable} environments.

\begin{verbatim}
\def\set@table@environments{\
  \let\environment{longtable@float}{longtable}\
  \let\environment{longtable}{longtable@write}\
  \let\environment{longtable*@float}{longtable*}\
  \let\environment{longtable*}{longtable*@write}\
  \let\environment{turnpage@float}{turnpage}\
  \let\environment{turnpage}{turnpage@write}\
}\
\do@if@floats{table}{.tbx}\
\appdef\document@inithook{\set@table@environments}\
\appdef\class@enddocumenthook{\printtables\relax}\
\newenvironment{longtable@write}{\write@@float{longtable}{table}}{\endwrite@float}\
\newenvironment{longtable*@write}{\write@@float{longtable*}{table}}{\endwrite@float}\
\newenvironment{turnpage@write}{\immediate\write\tablewrite{\string\begin{turnpage}}}{\immediate\write\tablewrite{\string\end{turnpage}}}\
\end{verbatim}

The user-level command \texttt{\printtables} determines where the tables are to appear in a document in which \texttt{\floats@sw} is false. If the user invokes the \texttt{nofloats} and fails to insert a \texttt{\printtables} command, the tables will be printed at the end of the document. If the command is given, but floats are not being deferred, it amounts to a no-op.

\begin{verbatim}
\newcommand\printtables{\begingroup\let\environment{longtable}{longtable@write}\
\let\environment{longtable*}{longtable*@write}\
\let\environment{turnpage}{turnpage@anchored}\
\prepdef\longtable{\trigger@float@par}}\
\end{verbatim}
We define the `video` environment analogously to the `figure` and `table` environments; it is intended to contain a video.

The video counter, float placement defaults, strings.

```latex
\newcounter{video}
\renewcommand \thevideo {\@arabic{\c@video}}
```

File extension and localizable strings.

\begin{verbatim}
\def\ext@video{lov}
\def\fname@video{Video}
\def\lovname{List of Videos}
\end{verbatim}

Float type and default placement.

\begin{verbatim}
\def\fps@video{tbp}
\def\ftype@video{4}
\def\fnum@video{\fname@video~\thevideo}
\end{verbatim}

\thevideo
We allocate a box register for use in tallying the column inches of floats of this type.

The documentation for the `hyperref` package, `hyperref.dtx` states: “classes or package which introduce new elements need to define an equivalent \theH<name> for every \the<name>” We do accordingly here.

But `hyperref.dtx` goes on to say, “We do make a trap to make \theH<name> be the same as \arabic<name>, if \theH<name> is not defined...” However, it’s not doing that right now (as of 6.77u), and I cannot find any such code in there anymore.

14.10.1 Deferring video Floats

We determine if videos are to float or be deferred until `\printvideos` time. If so, we open the stream that will receive the deferred document portions.

The user-level command `\printvideos` determines where the videos are to appear in a document in which `\floats@sw` is false. If the user invokes the `endfloats` class option and fails to insert a `\printvideos` command, the videos will be printed at the end of the document. If the command is given, but floats are not being deferred, it amounts to a no-op.
15 Tabular

Every APS tabular has a double (Scotch) rule above and below. The column specifier “d” is implemented using the dcolumn package, if available. FIXME: always load dcolumn!

\requirepackage{dcolumn}
% %

        }%
        %}
      }%
    %}

16 Footnote Text

\makefntext We customize the presentation of the footnote mark: it will not be italic.
\makefnmark
16.1 Citations, Bibliography, Endnotes

16.1.1 Bibliography

Load Patrick Daly’s natbib package, ftp://ctan.tug.org/macros/latex/contrib/supported/natbib

Note that natbib assumes that it loads over a document class, such as the article class, that has already defined thebibliography and @listi.

Note also that natbib also installs a command \NAT@set@cites into \AtBeginDocument which presumes that the proper \bibpunct command has been issued.

Note that the macro \NAT@sort controls whether citations are left alone (\NAT@sort=0), sorted (\NAT@sort=1), or sorted and compressed (\NAT@sort=2). Since we give natbib the sort&compress option, if you prefer sort, you need only \let\NAT@sort to be \@ne. However, if you prefer the effect of having neither sort nor sort&compress, you must \let\NAT@sort to be \z@ and you must also define \let\NAT@cmprs to be \z@.

As of version 8.2, natbib now no longer binds at the point where it is read in. This means that we can freely change \NAT@sort, \NAT@cmprs, and the new \NAT@merge. Henceforth, we require that this later version be used.

For other natbib customizations, you may proceed as if you were going to use the natbib.cfg file: anything that you can modify by this means is fair game. Once REVTeX is finished loading, you can assert any definitions for natbib that you wish.

\rev@citet \rev@citealp \rev@citealpnum

We define variants on natbib’s commands \cite, \citealp, and \citealpnum. \rev@citealpnum uses a numerical citation. \rev@citealp and \rev@citealpnum are the aliases of \onelinecite, \rev@citet that of \textcite.

In each case, we invoke \rtx@swap@citea to effect different productions between multiple arguments to the \cite command.
\rev@citealpnum provides textual citations where superscript citations are the default. These should be accessible via the \citet command. Therefore we remember how to do a numerical citation even when the superscript citation has been selected.

\begin{verbatim}
\expandafter\DeclareRobustCommand\expandafter\rev@citet \expandafter{\begingroup \rtx@swap@citea \g@bblefirsttoken \csname citet \endcsname} \end{verbatim}

\begin{verbatim}
\expandafter\DeclareRobustCommand\expandafter\rev@citealp \expandafter{\begingroup \rtx@swap@citea \g@bblefirsttoken \csname citealp \endcsname} \end{verbatim}

\begin{verbatim}
\expandafter\DeclareRobustCommand\expandafter\rev@citealpnum \expandafter{\begingroup \rtx@swap@citenum \g@bblefirsttoken \csname citealp \endcsname} \end{verbatim}

\begin{verbatim}
\def\rtx@swap@citenum{\rtx@swap@citea \let\@cite\NAT@citenum \let\NAT@mbox\mbox \let\citeyear\NAT@citeyear \let\NAT@space\NAT@spacechar} \end{verbatim}

\begin{verbatim}
\def\g@bblefirsttoken{\expandafter\true@sw \@empty} \end{verbatim}

\rtx@citesuper We prepare to redefine \texttt{natbib}'s procedure \texttt{\NAT@citesuper}, which is executed when setting a superscript citation. The \texttt{\hspace} is removed: in any case, it should really be \texttt{\hspace*}, to prevent an unwanted pagebreak.

\begin{verbatim}
\newcommand\rtx@citesuper[3]{\if\NAT@swa \leavevmode \unskip % \hspace{1\p@}% \textsuperscript{\normalfont#1}\end{verbatim}
We define a procedure that will set a footnote mark the same way that a citation is set. If footnotes are put in the bibliography with \footinbib@sw, then the corresponding mark should look the same as the result of a \cite. This is how we do it.

\def\@makefnmark@cite{egingroup\NAT@swatrue\@cite{{\@thefnmark}}{}{}}%

Prepare to override \texttt{natbib}'s definition of \texttt{\bibsection}.

\def\rtx@bibsection{\@ifx@empty\refname\par%}
\let\@hangfroms@section\@hang@froms
\expandafter\section\expandafter*{\refname}%
\@nobreaktrue%
\}%
\}%

The procedures \texttt{\rtx@def@citea}, \texttt{\rtx@def@citea@close}, and \texttt{\rtx@def@citea@box} can take over the management of \texttt{natbib}'s \texttt{\cite} macro to effect more sophisticated behavior of the punctuation between textual citations. The switch is performed by \texttt{\rtx@swap@citea}.

In these procedures, we use \texttt{\count@} to count the number of arguments of the \texttt{\cite} command, and we use \texttt{\c@NAT@ctr} to keep track of which argument we are processing. The latter counter is created by \texttt{natbib} and used there solely in bibliography processing, where it keeps track of the reference number. We take over its use in these macros, but only locally; therefore these procedures should work properly, even within the bibliography. \texttt{FIXME: check whether this is true!}

Because we are using a scratch counter \texttt{\count@}, we are vulnerable to other \TeX programmers who patch in to \texttt{natbib}'s processing and who might use that counter at the same time we are doing so. This is a potential source of trouble for us. \texttt{FIXME: store the value of \count@ in a private \csname xname!}

Note that \texttt{\rtx@def@citea} begins the same as \texttt{\NAT@def@citea}, which it replaces, then makes further decisions based on the values of the counters.

Note also that, in \texttt{natbib}, the replacement part of \texttt{\NAT@def@citea@close} could be rewritten as \texttt{\NAT@def@citea\prep\citea\texttt{\NAT@@close}}, which would them obviate the need for us to override its meaning.

Note, too, the effect of \texttt{\rtx@def@citea@box}, which replaces \texttt{\NAT@def@citea@box}, is almost the same as the latter, except the entire \texttt{\citea} is given as the argument of \texttt{\NAT@mbox}.
Finally, bear in mind that the English (and some American editors) do not place a comma before the “and”; our procedures do (but they could be rewritten with that convention).

We remember a temporary patch to \texttt{natbib}'s definition of \texttt{\BibitemShut}.

The following is a bug fix to \texttt{natbib} version 8.31b.

\begin{verbatim}
def\BibitemShut\{\texttt{#1}\}{
def\@bibitemShut{\texttt{#1}}
def\@bibitemStop{\texttt{\bibitemStop}}
def\@bibitemNoStop{\texttt{\bibitemNoStop}}
def\@ifx{\texttt{\relax}}{\texttt{\empty}}{\texttt{\empty}}
def\@expandafter{\texttt{\expandafter}}
def\@@empty{\texttt{\@empty}}
\end{verbatim}

%\providecommand{\bibAnnote}[3]{{}\BibitemShut{#1}}%
We define the sectioning command to use when starting the bibliography and gently coax `natbib` into using the formatting procedures that we want it to use. This way of setting up `thebibliography` automatically sets the label width based on the largest number used within the bibliography. This scheme will not work properly using the author/year style of bib entry, though.

We define \texttt{\bibnumfmt} to be \texttt{\place@bibnumber}, which is a macro managed by \texttt{REVTEX}. If the document defines \texttt{\bibnumfmt}, then that definition will be used instead, which is what the `natbib` package gives as its programming interface.

We set \texttt{\NAT@merge} to \texttt{\tw@}, which turns on `natbib`'s \texttt{mcite} capabilities. This is the default setting. If numerical citations are not to be used, then \texttt{\NAT@merge} should be set to \texttt{\one} (syntax is still enabled, but semantics are turned off).
The following is needed until natbib is at 8.31b.

We arrange for the selection of bibliography style to occur either due to the document’s explicit \bibliographystyle statement or via the journal substyle. Note that REVTEX is incompatible with any package that patches \bibliographystyle. Since natbib does this, we need a fix.

The Boolean \bibliographystyle@sw signifies that the document contains explicit \bibliographystyle markup. If, on the contrary, the bibliography style is set by the the society or the journal, then no explicit \bibliographystyle command appears in the document instance. In this case \bibliographystyle@sw will be \false@sw.

The following had been bug fixes to natbib version 8.31a.

The following are alterations to natbib version 8.31a to accommodate the possible space character preceding \BibitemShut, and to handle the case of merged references, where the first ends with a stop character.
We used to customize one of the productions of \texttt{natbib}, but no longer.

\%\let\bibitemContinue\bibitemContinue@rtx
% Here ends the code to be executed at \texttt{\rtx@require@packages} time.

Redefine a macro of \texttt{natbib} so that merged references are separated with a semi-colon.

\% \def\bibitemContinue@rtx{;\spacefactor\@mmm\space} %

\onlinecite \textcite

We extend \texttt{natbib}'s syntax with two commands to set a citation on the baseline (as opposed to superscripted) and as text (rather than parenthetical), respectively. A journal substyle that makes citations be superscripted or parenthetical as the case may be, should ensure that the author has continued access to these two styles.

Note that the society or journal substyle override the meanings of \texttt{@onlinecite} or \texttt{@textcite} given here.

1421 \DeclareRobustCommand\onlinecite{\@onlinecite}  
1422 \DeclareRobustCommand\textcite{\@textcite} %

\bibliography

Provide a hook for supplying \texttt{BibTeX} a bibliographic database that may contain, say, footnotes.

Note that \texttt{BibTeX} chokes if the argument of the \texttt{\bibdata} command has null fields, hence these tests.

1423 \let\bibliography@latex\bibliography  
1424 \def\bibliography@#1{\%  
1425 \auto@bib@empty

\csname c@\@mpfn\endcsname#1\relax \\
\frontmatter@thefootnote \\
\endgroup \\
}\% \\
\#2\par \\
The following line was commented out:
\\%\global\let\NAT@bibitem@first@sw\@secondoftwo \\
\end{verbatim}

\begin{verbatim}
\write@bibliographystyle \\
\end{verbatim}

We wish to delay committing the \texttt{\bibliographystyle} until as late as possible. The journal substyle will define a default bibliography style, and the document’s explicit \texttt{\bibliographystyle} command, if any, will override that default.
The \bibstyle command is allowed appear quite late in the .aux file. We now delay the automatic writing of the \bibstyle command to the end of the job.

The procedure \write@bibliographystyle tests whether a \bibliographystyle command has already been given. If not, it effectively executes the needed \bibliographystyle command, then neutralizes itself (we only need to do this once per job).

If the document lacks explicit \bibliographystyle markup, we execute \@bibdataout@rev, a hook for REVTEX-aware processing.

1463 \def\write@bibliographystyle{%
1464 \@ifxundefined\@bibstyle{}{%
1465 \expandafter\bibliographystyle@latex\expandafter{\@bibstyle}%
1466 \bibliographystyle@sw{}{\@bibdataout@rev}%
1467 }%
1468 \global\let\write@bibliographystyle\relax%
1469 \AtEndDocument{\write@bibliographystyle}%

\rtx@@citetp We wish to extend natbib to move spaces and citations around a superscript-style citation, imitating Donald Arseneau’s cite package with the super.

\rtx@citex The \rtx@@citetp procedure is substituted for \NAT@@citetp: it then calls the \rtx@citex procedure and implements the features of the citeautoscript class option. In the end, \@citex is called with its customary parameters.

\super@cite@let The document should be marked up as if citations were not superscripted, and then if you select a journal substyle that has superscripted citations, REVTeX will do its best to alter the formatting of the \cite to accomodate superscript style.

\super@cite@end Only citations set as superscript are affected by this procedure, because we check \@cite against \NAT@citesuper.

\super@cite@swap Here’s a subtle point: when is the argument of \super@cite@swap not the same as the token \@let@token? Answer: when the latter is \@sptoken! This case has to be handled separately.

\super@cite@swap Note that whether a punctuation is movable is determined by the definition of a particular control sequence name. A society or journal can alter things: to remove a character from the set, do, say, \expandafter\let\csnamertx@automove;\endcsname\relax. To add a character to the set, do, say, \expandafter\let\csnamertx@automove;\endcsname\@empty.

\super@cite@swap Implementation note: due to a \TeX peculiarity, we have to check for the case where \@let@token is a space token before we parse forward. At issue is the corner case where an end of file is at hand. If we were to let \super@cite@swap parse forward, we would encounter a \TeX end-of-file error. Note that the test will be true in many distinct cases: the file ends, the next character is a line terminator, the next character is a space.

1471 \def\rtx@@citetp[#1]{\@ifnextchar[{{\rtx@citex[#1]}{\rtx@citex[][#1]}}% 1472 \def\rtx@citex[#1][#2][#3]{%
1473 \begingroup
1474 \def\@tempa[#1][#2][#3]{%
1475 \@ifx\@cite\NAT@citesuper{%
1476 \leavevmode

The following must execute only after `natbib` is loaded and has set up its parameters (which it does at `\AtBeginDocument` time). If superscript citations have been selected, and if the `citeautoscript` class option has been selected, we patch into `natbib`'s mechanism to migrate punctuation around the citation, as in class `cite` with the `superscript` option.

```latex
\appdef\class@documenthook{\citeautoscript@sw{\@ifx{\@cite\NAT@citesuper}{\let\NAT@@citetp\rtx@@citetp}{}}}{}
\appdef\class@documenthook{\expandafter\let\csname rtx@automove.\endcsname\@empty\expandafter\let\csname rtx@automove,\endcsname\@empty\expandafter\let\csname rtx@automove:\endcsname\@empty\expandafter\let\csname rtx@automove;\endcsname\@empty}
```

Resolve an incompatibility between `natbib` and `listings`. The latter package tests `\chapter` (which has now been `\let` to `\relax` as a side effect `natbib`'s use of \LaTeX's `\ifundefined`).
We couch our fix in such terms that will not be disruptive if \chapter is actually defined at this point.

\@ifx{\chapter}{\let\chapter\@undefined}{}

\section*{16.1.2 \endnotes and \rtx@bibnotes}

\query: how do footnotes get thrown to the bibliography. \footinbib@sw appears to be irrelevant.

\footnotetext{A version of footnote that appears in the bibliography, or where \printendnotes appears.}

\endnote
The macro \texttt{\endnote@ext} is the file extension for the auxiliary file holding footnotes. The \texttt{\bibdata@app} and \texttt{\bibdata@ext} macros are used to form the name of a Bib\TeX\ database file holding footnotes.

\begin{verbatim}
\def\endnote@ext{.end} %
\def\bibdata@app{Notes} %
\def\bibdata@ext{bib} %
\end{verbatim}

\texttt{\@endnotetext} The procedure \texttt{\@endnotetext} writes a Bib\TeX\ .bib file for the purpose of inserting a footnote into the (numbered, unsorted) bibliography.

We need to define \texttt{\pre@bibdata} to be \texttt{\jobname\endnote@ext}, and we probably should define \texttt{\endnote@ext} to be something like “Notes.bib”.

In each case, the material to be written out requires robustification, provided by \texttt{\endnote@relax}. The commands \texttt{\label}, \texttt{\index}, and \texttt{\glossary}, which are robustified for \texttt{\markright} and \texttt{\addcontentsline}, are likewise robustified here.

Procedure \texttt{\@endnotetext@note} is the alias for \texttt{\@endnotetext} when the endnotes are to be processed separately from the bibliography (generally true when citations are not sorted).
\begin{itemize}
\item \textit{Procedure} \texttt{\@endnotetext} is the operative procedure when the endnotes are to be collated in with the other references, typically true when numerical citations are being used. The technique involves writing a \texttt{.bib} file (\texttt{\@bibdataout}) with each endnote typed as a \texttt{@FOOTNOTE} entry.

Timing note: doing \texttt{\openout} should be deferred until the beginning of the document, as is done here. This allows one to make a format (\texttt{revtex4-1.dtx.fmt}) file out of this class.
\end{itemize}

\begin{verbatim}
\def\@endnotetext#1{\
  \begingroup\
  \immediate\write\@bibdataout{\
    @FOOTNOTE{\@endnotelabel,\note=#1}\
  }\
  \endgroup}
\end{verbatim}

At \texttt{\AtBeginDocument} time, we open the job's \texttt{revtex4-1.dtx.bib} file.

\begin{verbatim}
\def\endnote@relax{\let\label\relax \let\index\relax \let\glossary\relax \let\cite\relax \let\ref\relax \let\pageref\relax \let\(\relax \let\)\relax \let\\relax
%\let\protect\noexpand
%\let\protect\relax
\end{verbatim}

\begin{verbatim}
\verb|\endnote@relax| @\texttt{\AtBeginDocument} time, we open the job's \texttt{revtex4-1.dtx.bib} file.
\end{verbatim}
At \AtBeginDocument time, we open the job's revtex4-1.dtx.bib file. The hook is available for use by a society to place its own \@CONTROL record in the \@bibdataout stream.

The entry that controls processing of the revtex4-1.dtx.bst file has entry type \@CONTROL. The citation key (REVTEX41Control) is effectively a version number, which the revtex4-1.dtx.bst can use to interpret the bib entry.

Say if we want the \eprint field disabled. Otherwise accept the default of the revtex4-1.dtx.bst.

Place a \citation into the auxiliary file corresponding to this entry.

We have removed the endnotes facility from REVTeX, so the \printendnotes command now does nothing.

Moving footnotes to the bibliography is now accomplished through the automatic generation of a job BiBTeX database (called \pre@bibdata) containing the footnotes.

We define a function \@endnotesinbib, and a variant \@endnotesinbibliography. The former is invoked at the start of the end processing for \end{thebibliography}; the latter is a synonym.
The procedure typesets the footnotes that are to appear in the bibliography; the default is to simply arrange for the footnote counter to be reset at the start of the document.

Note that this code make the assumption that the counter used in \texttt{thebibliography} is $\texttt{\textbackslash{c@NAT@ctr}}$.

Here is the sole place where $\texttt{\textbackslash{footinbib}@sw}$ has an effect, other code simply assigning its value. If it is false, or $\texttt{\textbackslash{authoryear}@sw}$ is true, then footnotes are handled by the default mechanism.

The endnotes facility has been removed. Also, there is no need to queue up $\texttt{\textbackslash{auto@bib}}$ here, since it is always queued up elsewhere.

The switchover to setting footnotes in the bibliography changes the meaning of $\texttt{\textbackslash{footnote}}$ and substitutes the synonym for $\texttt{\textbackslash@endnotesinbib}$.

We arrange for the procedure $\texttt{\textbackslash{make@footnote@endnote}}$ to be executed at $\texttt{\textbackslash{class@documenthook}}$ time (we mustn’t do this earlier because the meaning of $\texttt{\textbackslash{footnotemark}}$ must not be changed before then, for the sake of $\texttt{ltxutil.dtx}$).

Under some circumstances, we must typeset the bibliography automatically. If the document requires footnotes to be set in the bibliography (effectively, class option $\texttt{footinbib}$), or that frontmatter footnotes be set in the bibliography (effectively, class option $\texttt{bibnotes}$), but contains no explicit $\texttt{\textbackslash{bibliography}}$ statement.
Note that this facility is not able to work more than once per document. If multiple bibliographies are required (e.g., per article), it will be the responsibility of the journal style to restore \texttt{auto@bib} to its original meaning so it can be re-invoked.

In procedure \texttt{auto@bib}, we first test for the presence of frontmatter footnotes deferred to the bibliography. If none, we further test for the presence of \texttt{bibitem} commands in the job’s revtex4-1.dtx.bbl file. If either condition is met, we ask for a bibliography. We know that the document itself lacks a \texttt{bibliography} statement, so we know the argument of the \texttt{bibliography} that we will issue.

\begin{verbatim}
def\auto@bib{%  
  \@ifx@empty\@FMN@list{%  
    \footinbib@sw{%  
      \@ifnum{\csname c@\@mpfn\endcsname}>\z@}{\true@sw}{\test@bbl@sw}%  
    }{%  
      \true@sw}%  
  }{%  
    \true@sw}%  
  %{  
    \bibliography{}}%  
  }{%  
    \def\auto@bib@empty{%  
        \let\auto@bib\@empty%  
  }%  
\def\auto@bib@empty{%  
  \let\auto@bib\@empty%  
\end{verbatim}

Testing the revtex4-1.dtx.bbl file involves defanging all expected commands and processing that file inside a box register (that will be simply discarded). We provide a new meaning for the \texttt{bibitem} command: it queues a Boolean.
The \bibitem@set is an alias for \bibitem for the purpose of detecting a non-trivial bibliography.

```latex
\newcommand\bibitem@set[1][]{% \bibitem@sw{}\aftergroup\true@sw\aftergroup\false@sw\egroup}
```

The \auto@bib@innerbib procedure reads in the revtex4-1.dtx.bbl file (if it exists) within a context where its thebibliography environment does nothing, not even establishing a group.

```latex
\def\auto@bib@innerbib{% \begingroup \let@environment{thebibliography}{thebibliography@nogroup} \bibliography{} \endgroup }% Environment thebibliography@nogroup is an alias of the thebibliography environment that cancels itself. It assumes that it is called within a thebibliography environment.

\def\thebibliography@nogroup#1{% \endgroup \def\@currenvir{thebibliography} \def\endthebibliography@nogroup{% \begingroup\long\def \@gobblethree #1#2#3{% \def\providecommand@j@nk#1[#2]{% \@ifnum{#2=\z@}{\def\j@nk}{% \@ifnum{#2=\@ne}{\def\j@nk##1}{% \@ifnum{#2=\tw@}{\def\j@nk##1##2}{% \@ifnum{#2=\thr@@}{\def\j@nk##1##2##3}{% \def\j@nk##1##2##3\egroup} }% }% }% }% }% }% }% }% The following should be part of revtex4-1.dtxltxutil.
```

```latex
\long\def \@gobblethree #1#2#3{% \def\providecommand@j@nk#1[#2]{% \@ifnum{#2=\z@}{\def\j@nk}{% \@ifnum{#2=\@ne}{\def\j@nk##1}{% \@ifnum{#2=\tw@}{\def\j@nk##1##2}{% \@ifnum{#2=\thr@@}{\def\j@nk##1##2##3}{% \def\j@nk##1##2##3\egroup} }% }% }% }% }% }% }% 67
```
17 Initial setup

The standard LaTeX document classes execute certain commands that are best deferred until \texttt{\class@documenthook} time. Here, we effectively split \texttt{\pagenumbering} into two halves, with a default definition for \texttt{\thepage} and an initialization of \texttt{\c@page} at \texttt{\class@documenthook} time.

The meaning of \texttt{\thepage} can be overridden by society, journal, or anywhere within the document preamble, and the counter itself will be preset at the beginning of the document.

\begin{verbatim}
1674 \def\thepage{\@arabic\c@page} %
Note that this code is executed at \texttt{\setup@hook} time to allow for the possibility of overrides by packages like \texttt{geometry}.
1675 \appdef\setup@hook{%
1676 \tabbingsep \labelsep
1677 \leftmargin\leftmargini
1678 \labelwidth\leftmargin\advance\labelwidth-\labelsep
1679 \let\@listi\@listI
1680 \@listi
1681 )% % begin{macrocode}
1682 %
1683 % We ensure that the \texttt{environment} component mark (implemented by \texttt{\file{ltxgrid.dtx})}
1684 % is initialized properly (via a hook, itself defined via \texttt{\file{ltxutil.dtx)}).
1685 %
1686 % begin{macrocode}
1687 \appdef\class@documenthook{%
1688 \global\c@page\@ne
1689 \def\curr@envir{document}%
1690 \mark@envir{\curr@envir}%
1691 })%
\end{verbatim}

When setting the column grid, we have to override the procedure for formatting lists. Because \texttt{\twocolumngrid} requires rebalancing columns at some points, typesetting must employ only the manipulation of \texttt{\leftskip} and \texttt{\rightskip}, and must avoid the use of \texttt{\moveleft}, \texttt{\moveright}, and \texttt{\parshape}.

It is one of the stranger features of \TeX that these two separate mechanisms exist. The latter three have the effect of adding things to the Main Vertical List that cannot be removed and later added back with all their properties intact.

In detail, \texttt{\moveleft}, say, adds a box to the MVL with its reference point shifted horizontally by some amount relative to the reference point of the enclosing list. If that box is removed from the MVL (via a \texttt{\lastbox} operation in the output routine), and later thrown back to the MVL, the shift of the box will have been "forgotten" by \TeX. This is a bug, but not one "acceptable to D. E. Knuth", so it will never be fixed.

19 Changing the page grid

19.1 Avoiding Grid Changes

In preprint styles, “wide text” is a no-op, and the title page processing involves
no grid change.
\title@column Provide default meanings for \title@column and \close@column, in case they
were never defined. Note that the society or journal substyle may define
\title@column or \close@column: this code will not override.
\def\title@column{1}%
\def\close@column{1}%
\minipagefootnote@init
19.2 Galley Style: Margin Changes

A variant of preprint processing. Emulate journal appearance somewhat.

widetext@galley

DPC: We’re in galley style so do a lob sided display environment.

QUERY: How can we be sure that we are in galley style? ANSWER: as noted elsewhere, require that both \twocolumn@sw and \preprintsty@sw be false.

\def\galley@outdent{\rightmargin-\columnwidth\advance\rightmargin-\columnsep}\
\let\widetext@outdent\@empty
\newenvironment{widetext@galley}{%%
\list{}{\topsep\z@skip\listparindent\parindent\itemindent\parindent\\
\leftmargin\z@\parsep\z@\relax\widetext@outdent\relax\item\relax}\endlist}{%}

19.3 Grid Changing Via ltxgrid

In case \twocolumngrid has been invoked, switch column grid using the column grid-changing commands. Supply stub definitions of those commands here.

\set@footnotewidth@two
\ltx@no@footnote

\def\title@column@grid#1{%%
\minipagefootnote@init\onecolumngrid\begingroup\let\@footnotetext\frontmatter@footnotetext\relax
#1\endgroup\twocolumngrid\minipagefootnote@foot
\endlist{}}%
We slip into the one-column page grid within the scope of this environment.

Note that we set adornments above and below the \texttt{widetext}. These are set as leaders, so they will disappear at a page break.

\begin{quote}
Decide, finally, how the page grid is to be manipulated.
\end{quote}
The following two assignments determine what procedures are to be executed when the footnote set width is calculated, and how footnotes are to be composed at the bottom of the page. A society or journal wishing to do otherwise will override this code.

21 English-Language Texts
As this class is just for English language journals, we could hardwire these texts, but to make it easier to use this as a basis for the code for similar journal styles, separate out all the fixed text strings into babel-style macros of the form \...name

Note: for babel compatability, use version 1999/05/05 v3.6x or later.
Some of these might need changing in the society-specific code.

\today  Procedure \today is used in the article class, but not in this document class.
\texttt{\def\today{\ifcase\month\or January\or February\or March\or April\or May\or June\or July\or August\or September\or October\or November\or December\fi \space\number\day, \number\year}}

23 Patches for lineno.sty

The lineno package detects the case where the package has been loaded and the document invokes \linelabel, but the \linenumbers command has not been issued: it treats this case as an error.

It is wrong for validity of document syntax to be dependent upon package semantics: we make the condition a warning rather than an error.

\def\@LN@LLerror@org{%
\PackageError{lineno}{\string\linelabel\space without \string\linenumbers}{Just see documentation. (New feature v4.11)}%
\gobble%
}%
\def\@LN@LLerror@ltx{%
\PackageWarning{lineno}{To make the \string\linelabel\space command work, you must issue the \string\linenumbers\ command}{%
\gobble%
}%

If appropriate, enable line numbering within the abstract.

This mechanism applies generally: Create the box in a context in which the meaning of \par has been patched by lineno, then \unvbox the box in a context where \set@linepenalties has been executed, and follow up with \@linenumberpar, which forces a visit to the output routine just there. Note that here, we have to de-fang \@LN@parpgbrk, which would otherwise causes the appearance of a box with depth -1000 points. Go figure.

\appdef\class@documenthook{%
\@ifx{\@LN@LLerror\@LN@LLerror@org}{%
\class@info{Overriding \string\@LN@LLerror}%
\let\@LN@LLerror\@LN@LLerror@ltx%
}{}%
\@ifpackageloaded{lineno}{%
\@ifxundefined{\set@linepenalties}{%%
\let\prep@absbox{\set@linepenalties}%
\def\post@absbox{\let\@LN@parpgbrk\@empty\@linenumberpar}%
}{}%

One may well ask: how to obtain line numbering within an alignment in a float? This objective, along with line numbering within footnotes, would require extraordinary measures. The float would have to be thrown onto the MVL in order to acquire its line numbers, but that fragment of MVL would then have to be protected from being shipped out. The question of how to coordinate those lines’ numbers with those of lines in the MVL would also require dealing with.
24 Endgame for the Document Class

We provide for a “job macro package” that can override definitions and assignments made by the class or any other packages it loads.

24.1 Job Macro Package

You can create a “job macro package” for your document that will be read in automatically every time your document is processed. Thus, if your job is a file called `myarticle.tex`, then the file `myarticle.rty` will be read in just the same as if you had placed a \usepackage{myarticle.rty} statement immediately following your \documentclass statement.

Within your .rty file, you can define and use control sequence names that use the @ character and you can override any of the definitions or assignments made by the REVTEX document class or the selected journal substyle. That is, you have the power to really mess things up badly.

If you choose to have a job macro package, you are well advised to read the \LaTeX guide to document classes, clsguide.tex or read up on the subject in a book like the \LaTeX Companion.

The file template.rty contains a template for creating your own job macro package.

\begin{verbatim}
\newcommand{\rtx@require@packages}{
  \InputIfFileExists{\jobname.rty}{}{}
}
\end{verbatim}

24.2 Endgame Processing for the Document Class

The remaining steps in processing the document class involve determining the needed society, journal, and pointsize from the document’s class options and inputting the needed files or executing the indicated procedures.

Note that the society file is expected to declare options that will allow us to determine the journal involved, and the society and journal themselves determine the which pointsize options are declared, along with their meanings.

Note also that required packages are read in only after the document options have been processed, because the latter can affect the former.

Finally, the setup code is executed: this is code that depends on the meanings of the switches we define and on the code within the packages we load.

Note that there are other hooks in use: `\document@inithook`, which is executed right at the beginning of the document, and `\class@documenthook`, which serves as a vehicle for any `\AtBeginDocument` code we might wish to execute.

FIXME: use `\class@documenthook` only for things that bear on the MVL; use `\document@inithook` for all patches to procedures defined within the preamble.

Remember that `natbib` changes its state at `\AtBeginDocument` time, so we have to install our own code at a later point in the processing.

We determine the proper `\@society` by examining the document’s class options.
Then, we input the society’s substyle (which may in turn lead to loading a journal substyle or a pointsize substyle). The substyle should not assume the value of any class option: instead, it should install code into \setup@hook.

Now that the society has defined the class options relating to journals, and has defined \journal@default, we can process the journal substyle. We parse the options for one that sets \journal.

And we process the journal. Note that it is an error for a society file to fail to define \journal@default.

Now that the society and journal have finished defining any options relating to point size, we process the class options for any that set \pointsize.

And we process the pointsize. Note that it is an error for the society and journal to leave \pointsize@default undefined at this point, however, the journal may have overridden the assignment of the society.

Next, we process the class options for once and all. Doing so sets values for some of the Booleans that were introduced along with the \DeclareOption statements above.

CHANGE: We process the options in the order declared in the document; this gives the document greater control.

Now that the class options have been processed, we can load all the packages that we know need loading.

At this point, the society substyle, the journal substyle, and the pointsize have all been processed, along with the document class options. Some of these have left things for later; we do these now.

This portion of the code for this class file must appear at the very end: The procedure \setup@hook should be executed at the very end of the class file. Any code that relies on the value of any of the @sw switches or will patch the code of one of the required packages should be executed here.

Warn if past maturation date. This code to be enabled only in beta software.

\@fpbot 0pt plus 1fil
30 The \texttt{aps} class extension: the \texttt{aps} module

The file \texttt{aps.rtx} is read in by the \texttt{revtex4} document class if \texttt{@society} has the value \texttt{aps}. 
Here, code specific to APS journals is separated out from the REVTeX document class. (Other societies can customize REVTeX by supplying their own .rtx file.)

This class extension file is a model for a class extension you might write yourself.

First, incorporate a \ProvidesFile command with an optional argument giving the version information, e.g.,

\% \ProvidesFile{foo}[2001/09/11 v1.1 Docinfo]\%

Within the society substyle, there are two things we must do as well: define the default journal,

\% \def\@journal@default{pra}\%
\%

And do likewise for the point size:

\% \def\@pointsize@default{10}\%
\%

We first define some text entities (amounting to journal abbreviations), then some APS-specific initialisations, then code for particular APS journals. In the latter case, the choice is keyed off the macro \@journal.

30.1 Defend Against Forseeable Errors

Protect this file from being read in by anything but REVTeX.

\%<#aps>

Here are the class options relating to the APS:

\%<#aps>
30.2 Abbreviations

The following macros constitute typing shortcuts for certain journal names.

30.3 APS Setup

Here we define the default procedures for APS journals. Individual APS journals may override these definitions.

30.3.1 Title block

The specifics of the title block. Apply to all APS journals; individual journals may override these settings.

\@fnsymbol

The L\TeX \ kernel definition of \@fnsymbol is overridden. The definition in revtex4-1.dtxfixltex2e.sty serves as a guide to the new way to symbol, working in both text- and math modes.

revtex4-1.dtxfixltex2e.sty duplicates some features of revtex4-1.dtxltxgrid and revtex4-1.dtxltxutil, however, so it may be incompatible with REVT\TeX. In case
it is not loaded, we must provide a meaning for \textOrMath, which that package makes robust. I believe that it is @@fnsymbol itself that ought to be robustified. e\TeX further complicates matters; we do not especially accomodate it.

Not! \textOrMath must be made robust in any case (Bug 530). I return things to follow core \LaTeX 2ε (revtex4-1.dtxlatex.ltx).

\begin{verbatim}
\def@@fnsymbol#1{\ensuremath{\ifcase#1\or *\or \dagger\or \ddagger\or \mathsection\or \mathparagraph\or % \|\or **\or \dagger\dagger\or \ddagger\ddagger\else \mathsection\mathsection\or \mathparagraph\mathparagraph\or ***\or \dagger\dagger\dagger\or \ddagger\ddagger\ddagger\else \mathsection\mathsection\mathsection\or \mathparagraph\mathparagraph\mathparagraph\or % \@ctrerr\fi}}%
\appdef\document@inithook{%
\ifxundefined\textOrMath{\DeclareRobustCommand\textOrMath{\@ifmmode{\false@sw}{\true@sw}}%}
\}%
\let\thefootnote@latex\thefootnote
\end{verbatim}

We assign the default titlepage style for APS; a journal or document instance may override by invoking one of the other \clo@... procedures defined in REV\TeX.

\begin{verbatim}
\clo@groupedaddress

\titlepage
\end{verbatim}

A comment: “article.cls sets this to one not zero?”
\frontmatter@abstractheading  APS Journals all set the abstract head the same way, with no head. However, if the user has specified the preprint class option, then the abstract will have a head.

\begin{verbatim}
def\frontmatter@abstractheading{
  \preprintsty@sw{
    \begingroup
    \centering\large \abstractname \par
    \endgroup}
}
\end{verbatim}

\frontmatter@abstractwidth  All APS journals set the abstract to the same width.

\begin{verbatim}
def\frontmatter@abstractwidth{400\p@}
\end{verbatim}

\frontmatter@abstractfont  All APS journals set the abstract body the same way.

\begin{verbatim}
def\frontmatter@abstractfont{
  \small \parindent1em
  \adjust@abstractwidth
}
\end{verbatim}

\begin{verbatim}
def\adjust@abstractwidth{
  \dimen@\textwidth \advance\dimen@-\frontmatter@abstractwidth
  \divide\dimen@\tw@
  \galley@sw{
    \advance\rightskip \tw@ \dimen@
  }
  \advance\leftskip \dimen@
  \advance\rightskip \dimen@
}
\end{verbatim}

All APS journal preprints use separate titlepage and full-width abstract. In effect, we establish a society default value for \preprintsty@sw, and for \titlepage@sw.

\begin{verbatim}
\@booleanfalse\preprintsty@sw
\@booleantrue\titlepage@sw
\end{verbatim}

We choose the page style for all APS journals. The journal may override by inserting its own code in \setup@hook. Users wishing to customize their documents will be able to invoke a \pagestyle command anywhere in the preamble; it will override the assignments here.
Here is the big switch for APS preprints. Note that \texttt{\preprintsty@swis} also consulted in various procedures, but we assume its value does not change after \texttt{\setup@hook} time.

\begin{verbatim}
\appdef\setup@hook{%
\preprintsty@sw{%
\def\frontmatter@abstractwidth{\textwidth}%
\def\frontmatter@affiliationfont{\it}%
\let\section\section@preprintsty
The following line of code had been commented out at this point.
%
%  \let@hangfrom@section\@hangfrom@section@preprintsty
%}
\let\subsection\subsection@preprintsty
\let\subsubsection\subsubsection@preprintsty
}%
\ps@article%
\ps@article%
\frontmatter@authorformat
All APS journals set the author list the same. The leading is 11.5 points, and there is 11.5 points of extra space above the first author line (which amounts to the same thing as 11.5 points extra below the title) for a total of 23 points base-to-base.

\begin{verbatim}
\def\frontmatter@authorformat{%
\skip@\@flushglue
\@flushglue\z@ plus.3\hsize\relax
\centering
\advance\baselineskip\p@
\parskip11.5\p@\relax
\@flushglue\skip@
%
\@flushglue\skip@
\frontmatter@above@affilgroup
The default amount of space above affiliation. APS Journals have 24 points b-b above an affiliation group.

\begin{verbatim}
\def\frontmatter@above@affilgroup{%
The following line of code had been commented out at this point.
%
%  \addvspace{0\p@}%
%  \addvspace{0\p@}%
%}
\frontmatter@above@affilgroup%
\end{verbatim}
\end{verbatim}
\end{verbatim}

97

The default amount of space above affiliation. APS Journals have no extra space between author group down to common affiliation.

\def\frontmatter@above@affiliation@script{\skip@\@flushglue\@flushglue\z@ plus.3\hsize\relax\centering\@flushglue\skip@\addvspace{3.5\p@}\}

\def\frontmatter@above@affiliation{\preprintsty@sw{}{\addvspace{12\p@}}}

The following line of code had been commented out at this point.

\addvspace{12\p@}

All APS journals set the affiliation the same.

\def\frontmatter@affiliationfont{\small\it}

PRL: 1.5 points extra: 13 points base-to-base above.

\def\frontmatter@collaboration@above{\preprintsty@sw{}{\parskip1.5\p@\relax}}

All APS journals set the title page using the same font and size. However, justification varies for the title block elements, so we assert none here.

\def\frontmatter@setup{\normalfont}

All APS journals set the article title the same.

Note: Spacing from title to author is 23 points base-to-base.

\def\frontmatter@title@above\addvspace{6\p@}\%
\def\frontmatter@title@format{\large\bfseries\centering\parskip\z@skip}
\def\frontmatter@title@below\%

All APS journals share this procedure for setting the titlepage footnote text.

\def\@author@parskip{3\p@}\%
\def\frontmatter@makefnmark{\%}
All APS journals use the same format for the “Received, Revised, etc.” block on the title page.

Change note: 11.5 points b-b from author/affiliation down to date.

The following line of code had been commented out at this point.

\everypar{\hbox{bgroup(\@gobble@\leavemode\uppercase}}
\def\par{\@ifvmode{}{\unskip)\egroup\@@par}}
\def\punct@RRAP{;\egroup\ \hbox{bgroup}}
\def\@gobble@\leavemode@uppercase#1#2{\expandafter\MakeTextUppercase}
\frontmatter@PACS@format
\frontmatter@keys@format
\ps@titlepage
Title page style. Currently empty except for preprint header, which consists of all the \preprint arguments, stacked flush right at the right margin.
30.3.2 Stacked Heads

All APS journals put a period (.), followed by quad space, after the section number. Also, no hanging section number.

Note that in the following, we wish to set the section head uppercase, so we use David Carlisle’s \MakeTextUppercase. However, because this procedure
effectively parses its argument (looking for things to *not* translate), it has to be invoked in such a way that the argument of the `\section` command is passed to it as its own argument.

To accomplish this, we use the `@hangfrom` hook, which was developed for this purpose.

```latex
\def\section{% 
  \@startsection
  {section}%
  {1}%
  {\z@}%
  {0.8cm \plus one \minus .2ex}%
  {0.5cm}%
  {}%
  \normalfont\small\bfseries
  \centering
}%
\def\@hangfrom@section#1#2#3{
  \@hangfrom{#1#2}
  \MakeTextUppercase{#3}
}%
\def\@hangfroms@section#1#2{#1\MakeTextUppercase{#2}}%
\def\subsection{% 
  \@startsection
  {subsection}%
  {2}%
  {\z@}%
  {.8cm \plus one \minus .2ex}%
  {.5cm}%
  {}%
  \normalfont\small\bfseries
  \centering
}%
\def\subsubsection{% 
  \@startsection
  {subsubsection}%
  {3}%
  {\z@}%
  {.8cm \plus one \minus .2ex}%
  {.5cm}%
  {}%
  \normalfont\small\itshape
  \centering
}%
```

### 30.3.3 Runin Heads

```latex
\def\paragraph{% 
  \@startsection
} %
```
Here are the formatting procedures specific to the preprint style; the only difference is that the heads are flush left instead of centered.

\section@preprintsty
\subsection@preprintsty
\subsubsection@preprintsty
By default, APS journals set titlepage notes as footnotes.

\let\frontmatter@footnote@produce\frontmatter@footnote@produce@footnote
%

30.3.4 Table of Contents

The toc will itself make an entry in the toc, but we temporarily turn off toc formatting for the duration.

\def\pnumwidth{1.55em}%
\def\tocmarg {2.55em}%
\def\dotsep{2}%
\def\ltxu@dotsep{4.5pt}%
\setcounter{tocdepth}{3}%
\def\tableofcontents{%
\addtocontents{toc}{{\string\tocdepth@munge}%
\print@toc{toc}%
\addtocontents{toc}{{\string\tocdepth@restore}%
}%
\def\tocdepth@munge{%
\let\l@section@saved\l@section
\let\l@section\@gobble@tw@
}%
\def\@gobble@tw@#1#2{}%
\def\tocdepth@restore{%
\let\l@section\l@section@saved
}%

The following definition of \l@part is a variant on the definition of \l@@sections in ltxutil.dtx.

\def\l@part#1#2{%addpenalty{\@secpenalty}%
\begingroup
\settocdim@pagenum\@tempboxa{#2}%
\@tempdima 3em %
\parindent \z@ %
\rightskip\tocleft@pagenum plus 1fil\relax

\begin{verbatim}
\def\l@subsubsection{}\
\end{verbatim}

\begin{verbatim}
\def\l@paragraph#1#2{}\
\def\l@subparagraph#1#2{}\end{verbatim}

Activate the auto TOC processing.

\begin{verbatim}
\let\tocpre\tocpre@auto\let\tocpost\tocpost@auto\end{verbatim}

### 30.3.5 Default column bottom

All APS journal styles have flush bottoms.

\begin{verbatim}
\@booleanfalse\raggedcolumn\end{verbatim}

### 30.3.6 Table alignment style

All APS publications have the same table specification: Scotch rules above and below, centered in column.

\begin{verbatim}
\tableleftskipfloat\tabmidskipfloat\tabrightskipfloat\array@row@prefloat\array@row@postfloat\end{verbatim}

\begin{verbatim}
\def\tableleftskipfloat{\z@ plus\hsize}\def\tabmidskipfloat{\@flushglue}\def\tabrightskipfloat{\z@ plus\hsize}\def\array@row@prefloat{\hline\hline
\noalign{\vskip\doublerulesep}}\def\array@row@postfloat{\noalign{\vskip\doublerulesep}\hline}\end{verbatim}
30.3.7 Footnote formatting

We customize the formatting of footnotes for all APS journals.

\makefntext
\long\def\makefntext#1{%\parindent1em\noindent\nobreak\hskip-\leftskip\hss\@makefnmark\ %#1\par}%
\frontmatter@makefntext
We ensure that frontmatter footnotes format similarly to body footnotes. But we provide our own hypertext anchor, otherwise not provided.
\long\def\frontmatter@makefntext#1{%\parindent1em\noindent\nobreak\hskip-\leftskip\Hy@raisedlink{\hyper@anchorstart{frontmatter.\expandafter\the\csname c@\@mpfn\endcsname}\hyper@anchorend}\hss\@makefnmark\ %#1\par}%
30.3.8 Appendix
\appendix
\predef\appendix{%\let\@hangfrom@section=\@hangfrom@appendix}%
\appendixcntformat
\let\@hangfrom@section\@hangfrom@appendix\let\@sectioncntformat\@appendixcntformat
\def\@hangfrom@appendix#1#2#3{%#1\@if@empty{#2}{\hss\@makefnmark\ %\par}\@if@empty{#3}{}{:\ #3}\par}
30.3.9 Bibliography

Customize \texttt{REVTeX} for the journal substyle; this task requires three components: the \LaTeX\ \texttt{apsrev.bst} and \texttt{apsrmp.bst} style files, and customizations of the \texttt{thebibliography} environment.

\texttt{\@bibstyle} Define the argument of the \texttt{\bibliographystyle} command (if the document does not do so). The user must have installed a \texttt{.bst} file of the corresponding name. This file will then be used by \LaTeX\ when compiling the document’s \texttt{.bbl} file.

To generate \texttt{apsrev.bst}, use \texttt{custom-bib} version 4.21 or later. Run the \texttt{.bst} generator, \texttt{makebst.tex}, and accept all defaults, with the following exceptions:

1. LANGUAGE FIELD: \texttt{i: lang}—Use language field to switch hyphenation patterns for title

2. PRESENTATIONS: \texttt{b: pres,pres-bf}—Presentation, speaker bold face

3. ORDERING OF REFERENCES: \texttt{c: seq-no}—Citation order (unsorted, like \texttt{unsrt.bst})

4. ORDER ON VON PART: \texttt{x: vonx}—Sort without von part (de la Maire after Mahone)

5. AUTHOR NAMES: \texttt{i: nm-init,ed-au}—Initials + surname (J. F. Smith)

6. POSITION OF JUNIOR: \texttt{*: jnrlst}—Junior comes last as Smith, John, Jr.

7. TYPEFACE FOR AUTHORS IN LIST OF REFERENCES: \texttt{u: nmft,nmft-def}—User defined author font (\texttt{\bibnamefont})

8. FONT FOR FIRST NAMES: \texttt{u: fnm-def}—First names in user defined font (\texttt{\bibfnamefont})

9. EDITOR NAMES IN INCOLLECTION ETC: \texttt{a: nmfted}—Editors incollection like authors font

10. FONT FOR ‘AND’ IN LIST: \texttt{r: nmand-rm}—‘And’ in normal font (JONES and JAMES)

11. FONT OF CITATION LABELS IN TEXT: \texttt{u: lab,lab-def}—User defined citation font (\texttt{\citenamefont})

12. FONT FOR ‘AND’ IN CITATIONS: \texttt{r: and-rm}—Cited ‘and’ in normal font

13. DATE FORMAT: \texttt{*: yr-par}—Date in parentheses as (May 1993)
| 14. DATE EMPTY: | - | `date-nil-x`—If date is empty, then do not produce the surrounding punctuation (parens, brackets, colon, comma) |
| 15. TITLE OF ARTICLE: | d | `tit.qq`—Title and punctuation in double quotes (“Title,” ..) |
| 16. INPROCEEDINGS CHAPTER AND PAGES, LIKE INBOOK: | - | `inproceedings-chapter`—produce pages after chapter, just as in InBook |
| 17. TITLE PRESENT IN ARTICLE, INCOLLECTION, AND INPROCEEDINGS: | x | `jtit-x`—Title is ignored |
| 18. INPROCEEDINGS CHAPTER AND PAGES, LIKE INBOOK: | y | `inproceedings-chapter`—produce pages after chapter, just as in InBook |
| 19. ARTICLE BOOKTITLE PRESENT: | : | `article-booktitle`—format booktitle |
| 20. ARTICLE SERIES PRESENT: | : | `article-series`—article can has series |
| 21. JOURNAL NAME FONT: | r | `jttl-rm`—Journal name normal font |
| 22. JOURNAL NAME WITH ADDRESS: | y | `journal-address`—Include address field (in parentheses) along with journal name |
| 23. BOOK TITLE FIELDS: | y | `book-bt`—Field ‘booktitle’, or if absent field ‘title’, is book title |
| 24. THESIS TITLE OPTIONAL: | : | `thesis-title-o`—Title is optional: no warning issued if empty |
| 25. TECHNICAL REPORT TITLE: | b | `trtit-b`—Tech. report title like books |
| 27. JOURNAL VOLUME: | b | `vol-bf`—Volume bold as `vol(num)` |
| 28. JOURNAL VOL AND NUMBER: | x | `vnum-x`—Journal vol, without number as 34 |
| 29. VOLUME PUNCTUATION: | c | `volp-com`—Volume with comma as `vol(num). ppp` |
| 30. PAGE NUMBERS: | f | `jpg-1`—Only start page number |
| 32. INBOOK PERMITS TITLE, BOOKTITLE, AUTHOR, EDITOR: | a | `inbook-editor-booktitle`—Allow using both title/booktitle, both author/editor |
33. CONFERENCE ADDRESS FOR BOOK, INBOOK, INCOLLECTION, IN-
PROCEEDINGS, PROCEEDINGS: a: bookaddress—Italic booktitle fol-
lowed by bookaddress in roman

34. NUMBER AND SERIES FOR BOOK, INBOOK, INCOLLECTION, IN-
PROCEEDINGS, PROCEEDINGS: *: num-xser—Allows number without
series and suppresses word "number"

35. WORD NUMBER CAPITALIZED FOR NUMBER AND SERIES: c:
number-cap—Capitalize word ‘number’ as: "Number 123”

36. WORD CHAPTER CAPITALIZED: c: chapter-cap—Capitalize word
‘chapter’ as: ‘Chapter 42’

37. COMBINING NUMBER AND SERIES: x: series-number—Series number
as: ‘Springer Lecture Notes No. 125’

38. POSITION OF NUMBER AND SERIES: b: numser-booktitle—After
book title and conference address, and before editors

39. VOLUME AND SERIES FOR BOOKS/COLLECTIONS: s: ser-vol—
Series, vol. 23

40. VOLUME AND SERIES FORMATTING: y: ser-rm—format series roman
, even when used with volume

41. WORD VOLUME CAPITALIZED FOR VOLUME AND SERIES: y:
volume-cap—Capitalize word ‘volume’, as: ‘Volume 7 in Lecture Series’

42. POSITION OF VOLUME AND SERIES FOR INCOLLECTION, INBOOK,
AND INPROCEEDINGS: e: ser-ed—Series and volume after booktitle and
before editors

43. JOURNAL NAME PUNCTUATION: x: jnm-x—Space after journal name

44. PAGES IN BOOK: *: pg-bk, book-chapter-pages—As chapter and page:
chapter 42, page 345

45. PUBLISHER IN PARENTHESES: d: pub-date—Publisher with address
and date in parentheses (Oxford, 1994)

46. EMPTY PUBLISHER PARENTHESES: y: ay-empty-pub-parens-x—
eliminate parentheses altogether if nothing inside

47. PUBLISHER POSITION: : pre-pub—Publisher before volume, chapter,
pages

48. : : pre-edn—Edition before publisher

51. ISSN NUMBER: *: issn—Include ISSN for periodicals

52. DOI NUMBER: a: doi-link,doi—Doi forms a link to the publication, anchored to the volume or title

53. EDITOR IN COLLECTIONS: b: edby—In booktitle, edited by .. (where .. is names)

54. PUNCTUATION BETWEEN SECTIONS (BLOCKS): c: blk-com—Comma between blocks

55. FINAL PUNCTUATION: c: fin-endbibitem—Command at end instead of period

56. ABBREVIATE WORD ‘PAGES’: a: pp—‘Page’ abbreviated as p. or pp.

57. ABBREVIATE WORD ‘EDITORS’: a: ed—‘Editor’ abbreviated as ed. or eds.

58. OTHER ABBREVIATIONS: a: abr—Abbreviations of such words

59. ABBREVIATION FOR ‘EDITION’: a: ednx—‘Edition’ abbreviated as ‘ed’

60. EDITION NUMBERS: n: ord—Numerical editions as 1st, 2nd, 3rd, etc

61. STORED JOURNAL NAMES: a: jabr—Abbreviated journal names

62. FONT OF ‘ET AL’: i: etal-it—Italic et al

63. ADDITIONAL REVTeX DATA FIELDS: r: revdata,eprint,url,url-blk,translation—Include REVTeX data fields collaboration, eid, eprint, archive, url, translation

64. SLACcitation FIELD: : SLACcitation—Produce SLACcitation field

65. NUMPAGES DATA FIELD: *: numpages-x—Do not include numpages field

66. URL ADDRESS: *: url,url-prefix-x—URL without prefix (default: ‘URL ’)

67. REFERENCE COMPONENT TAGS: b: bibinfo—Reference component tags like \bibinfo in the content of \bibitem

68. ELEMENT TAGS: b: bibfield—Element tags like \bibfield in the content of \bibitem

69. COMPATIBILITY WITH PLAIN TEX: *: nfss—Use LaTeX commands which may not work with Plain TeX

A file apsrev.dbj file equivalent to the following should result:
30.3.10 Comparing apsrev.bst and apsrmp.bst

These two bibliographic styles differ as follows: apsrev.dbj has the following guard codes, which apsrmp.dbj does not:
• seq-no— Citation order (unsorted, like unsrt.bst)
• nm-init, ed-au— Initials + surname (J. F. Smith)
• blkyear— Missing date left blank
• date-nil-x— If date is empty, then do not produce the surrounding punctuation (paren, brackets, colon, comma)
• inproceedings-chapter— produce pages after chapter, just as in InBook
• techreport-institution-par— format tech report institution like book publisher
• vnum-x— Journal vol, without number as ‘34’
• pub-date— Publisher with address and date in parentheses (Oxford, 1994)
• pre-pub— Edition, publisher, volume, chapter, pages. Note that both use guard code pre-edn.

apsrmp.dbj has the following guard codes, which apsrev.dbj does not:
• nm-rev1— Only first name reversed, initials (AGU style: Smith, J. F., H. K. Jones)
• dt-beg— Date after authors
• vnum-sp— Journal vol (num) as ‘34 (2)’
• pp-last— Pages at end, but before any notes
• pub-par— Publisher in parentheses
• school-par— School/address in paren: ‘(school, address)’
• bkedcap— ‘Name Editor,’ as above, editor upper case
• and-com— Comma even with 2 authors as ‘Tom, and Harry’

We ensure that the journal substyle has the first word in the matter by installing the (default) APS code later on (see Section 30.6).

\authoryear@sw Numerical citations: default value of \authoryear@sw is false.
\bibpunct The following commands effectively establish the style in which \cite commands are formatted. You can think of them as the second needed component for the bibliography.

Set up for APS numerical citations (once the packages are loaded). The journal substyle can override these choices.

Note that, prior to natbib version 8.21, changing \NAT@sort at this late hour would not be totally effective; you would have to give natbib the relevant options
at load time. From version 8.21 on, \texttt{\NAT@sort} and \texttt{\NAT@cmprs} are not bound at all.

\begin{verbatim}
2952 \appdef\setup@hook{\
2953 \bibpunct{[}{]}{,}{n}{}{,}\
2954 }\
\end{verbatim}

\texttt{\pre@bibdata} Set up to write endnotes to a .bib file; its data will be incorporated into the bibliography.

\begin{verbatim}
2955 \def\pre@bibdata{\jobname\bibdata@app}\
\end{verbatim}

\texttt{\bibsection} We define the sectioning command to use when starting the bibliography.

\begin{verbatim}
2956 \appdef\setup@hook{\
2957 \def\bibsection{\
2958 \par\

30.4 Journal- and Pointsize-Specific Code

After this substyle is read in, we will execute the code specific to the selected journal: execute the society/journal .rtx file if it exists, or execute the society/journal
macro (if the latter is not defined, it will \relax out). Here we define the default journal.

\begin{verbatim}
3028 \def\@journal@default{pra}\

30.5 Typesize-Specific Code

After this society file is read in, we will process the \@pointsize-specific code. Here we define the default.

\begin{verbatim}
3029 \def\@pointsize@default{10}\

Note: the convention in REVT EX and its substyles is that the substyle must not override any explicit class options declared by the document. This means that the various Booleans of Section 9 may be assigned here only if they are still undefined at this point.

For the APS, we supply code specific to journals PRA, PRB, PRC, PRD, PRE, PRL, and RMP. At present, they are identical, with the exception of PRB and RMP.

For most all of the APS journals, the journal-dependent code is relatively meager and is therefore embedded in this file. However, the RMP code is sufficiently extensive that splitting it out into a separate file is more convenient.

30.5.1 pra

There is no code specific to pra.

\begin{verbatim}
3030 \def\rtx@apspra{\
3031 \class@info{APS journal PRA selected}\
3032 }\

30.5.2 prb

We define a \citealp-like procedure that uses a numerical citation; it is for use in the PRB journal.

\begin{verbatim}
3033 \def\rtx@apsprb{\
3034 \class@info{APS journal PRB selected}\
3035 }\

PRB requires superscript citations. We use Patrick Daly’s natbib package, and hyperref and other packages are already set up to cope with this.

\begin{verbatim}
\bibpunct{\textsuperscript{,}}{,}{s}{}{,}{}\
\let\onlinecite\rev@citealpnum\
\end{verbatim}

\begin{verbatim}
\let\frontmatter@footnote@produce\frontmatter@footnote@produce@endnote\
\appdef\setup@hook{\
\bibpunct{}{}{,}{s}{}{,}{}\
\let\onlinecite\rev@citealpnum\
}\end{verbatim}

\end{verbatim}

By default, PRB selects the bibnotes option. We also set up for numerical citations.

\begin{verbatim}
\pre@bibdata{\jobname\bibdata\app}\
\end{verbatim}

Set up to write endnotes to a .bib file; its data will be incorporated into the bibliography.

\begin{verbatim}
\end{notext}
\end{verbatim}

115

\end{verbatim}

Invoke \textsuperscript{superbib} option. If the document makes a selection of its own, it will override this assignment.

\begin{verbatim}
\let\place@bibnumber\place@bibnumber@sup
\end{verbatim}

End of prb code.

30.5.3 prc

There is no code specific to prc.

\begin{verbatim}
def\rtx@apsprc{%
class@info{APS journal PRC selected}%
}%
\end{verbatim}

30.5.4 prd

There is no code specific to prd.

\begin{verbatim}
def\rtx@apsprd{%
class@info{APS journal PRD selected}%
}%
\end{verbatim}

30.5.5 pre

There is no code specific to pre.

\begin{verbatim}
def\rtx@apspre{%
class@info{APS journal PRE selected}%
}%
\end{verbatim}

30.5.6 prl

\begin{verbatim}
def\rtx@apsprl{%
class@info{APS journal PRL selected}%
}%
\end{verbatim}

In PRL, the default is the \textsuperscript{bibnotes} option, and the Acknowledgments section has no head.

The References head is a device that may be described as a lozenge centered on the baseline, 71 points wide by 2 points thick, with the ends tapering to a half point in thickness. Space above 26 points base to base, below 31 base to base.

FIXME: this code may confound \texttt{geometry}

\begin{verbatim}
\let\frontmatter@footnote\produce\frontmatter\footnote\produce\endnote
\@booleanfalse\acknowledgments\sw
@appdef\setup\hook{%
\def\bibsection{%
\par
\begingroup
\baselineskip26\p@}
\bib@device{\hspace{72\p@}}%
\endgroup
\nobreak\nobreaktrue
\end{verbatim}
Implement length checking. Use the \texttt{times} and \texttt{mathtime} packages, plus whatever other processing is required to make the formatted output be true to the metrics of the journal.

Wait. Do not use mathtime after all. APS has their own way of doing math pi, involving Adobe Mathematical Pi and other fonts.

A PRL does not have numbered sections.

Note: we defer this code until after type size file is read in.
30.5.7 per

Here is code specific to per.
\def\rtx@apsprstper{%
\class@info{APS journal PRST-PER selected}%
To first order, PER is the same as PRB, with superscript citations.
\rtx@apsprb
Per Mark Doyle (2009-12-22), the default is longbibliography.
\@booleantrue\longbibliography@sw
“Section heads are bold, centered (Roman numeral, Latin letter)”
Article titles do not have surrounding double-quotes!
End of prb code.
}\%

30.5.8 prstab

There is no code specific to prstab.
\def\rtx@apsprstab{%
\class@info{APS journal PRSTAB selected}%
}\%

30.5.9 rmp

If this option has been selected, we will read in the needed code from the file apsrmp.rtx.

30.6 Establish APS Defaults

All APS journals except RMP effectively invoke the footinbib option. We rely on the RMP-specific code to override this assignment.
Procedure \texttt{@bibdataout@init} has the job of writing the control record into the job's \texttt{@jobname} revtex4-1.dtx.bib file, where it will adjust the options to revtex4-1.dtx.bst processing. It is installed into the initialization procedure \texttt{@bibdataout@init}, and its meaning is set by the society (APS) and journal. For all but RMP, we select the Physical Review style. For the latter case, we change the meaning, per the code in \texttt{apsrmp.rtx}.

An entry that controls processing of the revtex4-1.dtx.bst file has entry type \texttt{@CONTROL}.

\begin{verbatim}
  \@bibdataout@rev{\@bibdataout@aps}\
  \def\@bibdataout@aps{\
    \immediate\write\@bibdataout{\@CONTROL{apsrev41Control}}\
    \longbibliography@sw{\\texttt{author}="00",\texttt{editor}="1",pages="1",title="0",year="0"}}\
    \longbibliography@sw{\\texttt{author}="08",\texttt{editor}="1",pages="0",title="",year="1"}}\
  }\
\end{verbatim}

Place a \texttt{\citation} into the auxiliary file corresponding to this entry.

\begin{verbatim}
\if@filesw\immediate\write\@auxout{\string\citation{apsrev41Control}}\fi
\end{verbatim}

We install code that will select the presentation for \texttt{\bibitem}s and govern the Bibtex processing.

\begin{verbatim}
\let\place@bibnumber\place@bibnumber@inl\def\@bibstyle{apsrev\substyle@post}\
\end{verbatim}

\section{APS Sanity Checking}

Rule: if \texttt{\place@bibnumber} is \texttt{\place@bibnumber@sup} (citations are numbered and set superscript), then it makes no sense for \texttt{\footinbib@sw} to be \texttt{\false@sw} (footnotes set in the bibliography, as endnotes). If both conditions prevailed,
then the document would have footnotes and citations both as superscript arabic numbers, but independently numbered, which would be confusing.

Any society that provides for both superscript numbered citations as well as numbered footnotes should check for this same condition, and deal with it.

Note: an alternative would be for footnotes to use the same sequence of footnote devices that are used by the frontmatter footnotes (\frontmatter@thefootnote instead of arabic numbers).

In this case, we would want to refrain from resetting \c@footnote at the end of the title page formatting. We would also want to treat body footnotes identically to frontmatter footnotes: the assignments in \titleblock@produce would persist throughout the document.

But APS do not choose to go that route.

Here ends the substyle for society APS.

31 The rmp journal substyle: the rmp module

The file apsrmp.rtx is read in by the revtex4 document class if \@society has the value aps and \@journal has the value rmp.

It is read at the end of the aps.rtx, so all definitions and assignments in that file are operative unless overridden here.

Protect this file from being read in by anything but REVTeXX.

Protect this file from being read in as a society instead of a journal. In such a case, \@journal will be undefined.

One alternative: abort the document. Another alternative: try to recover: force load the aps society file
3158 \class@warn{Please specify the REV\TeX options [aps,rmp]!}%
3159 \@end
3160 \HOT

Log the journal substyle.
3161 \class@info{APS journal RMP selected}{}

31.1 Frontmatter

We assign the titlepage style for RMP; a document instance may override by invoking one of the class options of REV\TeX.

[clo]groupedaddress

\frontmatter@setup
3163 \def\frontmatter@setup{%
3164 \normalfont\sffamily\raggedright
3165 }%

\PACS@warn Per Mark Doyle, RMP never displays the PACS, so they don’t want the ‘use showpacs’ warning spit out.
3166 \def\PACS@warn{RMP documents do not display PACS. Your \string\pacs\space will be ignored}%

\frontmatter@title@above
\frontmatter@title@format
3167 \def\frontmatter@title@above{%
3168 \Large\bfseries\raggedright
3169}\def\frontmatter@title@format{%\Large\bfseries\raggedright
3170}\def\frontmatter@title@below{%\addvspace{12\p@}}% 24pt b-b down to first author

\frontmatter@authorformat Set the rag to a milder value, because we want to do true ragged right typesetting, as opposed to the \La\TeX default, which gives very poor results.

Note: author font is 9.8bp. 19.2bp/14.3bp above/below.
3170 \def\frontmatter@authorformat{%
3171 \preprintsty@sw{\vskip0.5pc\relax}{%}
3172 \tempskipa0\flushglue
3173 @flushgluez0\plus.8\hsize
3174 \raggedright\advance\leftskip.5in\relax
3175 @flushglue0\tempskipa
3176 \parskipz\skip
3177 \@totalleftmargin\leftskip
3178 }%

\frontmatter@affiliationfont
The hook \frontmatter@affiliationfont controls the formatting of affiliations and affiliation groups. The hook \frontmatter@above@affilgroup is invoked just before proceeding with author/affiliation processing. The \frontmatter@above@affiliation is the amount of space above affiliations in the groupedaddress style, and \frontmatter@above@affiliation@script is that for superscriptaddress.

Note: affiliation font is 9.03/10.4bp, 14.3bp/19.2bp b-b above/below
3179 \def\frontmatter@affiliationfont{% Helvetica 9/10.2
3180 \small\slshape\selectfont\baselineskip10.5\p@\relax
Set up the default RMP style for title block authors and affiliations. We assign the titlepage style for RMP; a document instance may override by invoking one of the class options of REVTEX.

This command should override the effect of the corresponding command in the society substyle, and any document class option bearing on same will in turn override.

\frontmatter@abstractheading  Space above 21.8bp b-b.
\frontmatter@abstractfont  TimesTen 8.93bp/9.6bp X 360bp, indented 36bp, with 21.9/37.6bp b-b above/below
32.1 General Text

If not in preprint mode, RMP sets the type size to 10/12 point. Note: s/b 11.6bp leading FIXME: define \normalsize only if nobody else has done so.

32.2 Sectioning

We override the meaning of \secnums@rtx. The class option secnumarabic will continue to work.
In RMP, put a period (.), followed by ‘nut space’, after the section number. Also, hang the section number (the \LaTeX default).

\def\@seccntformat#1{\csname the#1\endcsname.\hskip0.5em\relax}

Note that we wish to set the section head uppercase, so we use David Carlisle’s \MakeTextUppercase. However, because this procedure effectively parses its argument (looking for things to not translate), it has to be invoked in such a way that the argument of the \section command is passed to it as its own argument.

To accomplish this, we use the \@hangfrom@ hook, which was developed for this purpose.

\def\section{% 
\@startsection{section}{1}{\z@}{0.8cm plus1ex minus.2ex}{0.4cm}{% 
\small\sffamily\bfseries\selectfont \raggedright {% 
\parindent\z@ 
\@hangfrom@section#1#2#3{\@hangfrom{#1#2}\MakeTextUppercase{#3}}% 
\\@hangfroms@section#1#2{#1\MakeTextUppercase{#2}}% 
\def\subsection{% 
\@startsection{subsection}{2}{\z@}{0.8cm plus1ex minus.2ex}{0.4cm}{% 
\\@hangfromsubsection#1#2#3{\@hangfrom{#1#2#3}\MakeTextUppercase{#3}}% 
\\@hangfromsubsection#1#2#3{#1\MakeTextUppercase{#2}}% 
\def\subsubsection{% 
\@startsection{subsubsection}{3}{\z@}{0.8cm plus1ex minus.2ex}{0.4cm}{% 
\\@hangfromsubsubsection#1#2#3#4{\@hangfrom{#1#2#3#4}\MakeTextUppercase{#4}}% 
\\@hangfromsubsubsection#1#2#3#4{#1\MakeTextUppercase{#2}}% 
\def\paragraph{% 
\@startsection{paragraph}{4}{\z@}{0.8cm plus1ex minus.2ex}{0.4cm}{% 
\\@hangfromparagraph#1#2#3#4{\@hangfrom{#1#2#3#4}\MakeTextUppercase{#4}}% 
\\@hangfromparagraph#1#2#3#4{#1\MakeTextUppercase{#2}}% 
}
3.2.3 Figure and Table Caption Formatting
32.4 Citations and Bibliography

Customize REVTeX for the journal substyle; this task requires three components: a \texttt{biblatex}.bst style file, customizing code for \texttt{natbib}, and customizations of the \texttt{thebibliography} environment.

\begin{quote}
\texttt{@bibstyle}
Define the argument of the \texttt{\bibliographystyle} command (if the document does not do so).

The user must have installed a .bst file of the corresponding name. This file will then be used by \texttt{BibTeX} when compiling the document’s .bbl file.

To generate \texttt{apsrmp.bst}, use \texttt{custom-bib} version 3.89d1 or later. Run the .bst generator, \texttt{makebst.tex}, with the following options:

1. STYLE OF CITATIONS: \ \texttt{a}: ay—Author-year with some non-standard interface

2. AUTHOR: \ \texttt{*}: nat—Natbib for use with natbib v5.3 or later

3. LANGUAGE FIELD: \ \texttt{l}: lang—Use language field to switch hyphenation patterns for title

4. PRESENTATIONS: \ \texttt{b}: pres,pres-bf—Presentation, speaker bold face

5. ORDER ON VON PART : \ \texttt{x}: vonx—Sort without von part (de la Maire after Mahone)

6. AUTHOR NAMES: \ \texttt{a}: nm-rev1—Only first name reversed, initials (AGU style: Smith, J. F., H. K. Jones)

7. POSITION OF JUNIOR : \ \texttt{*}: jnrlst—Junior comes last as Smith, John, Jr.

8. TYPEFACE FOR AUTHORS IN LIST OF REFERENCES: \ \texttt{u}: nmft,nmft-def—User defined author font (\texttt{\bibnamefont})

9. FONT FOR FIRST NAMES : \ \texttt{u}: fnm-def—First names in user defined font (\texttt{\bibfnamefont})

10. EDITOR NAMES IN INCOLLECTION ETC: \ \texttt{a}: nmfted—Editors incollection like authors font
11. FONT FOR ‘AND’ IN LIST: r: nmand-rm—‘And’ in normal font (JONES and JAMES)

12. FONT OF CITATION LABELS IN TEXT: u: lab,lab-def—User defined citation font (\citemanefont)

13. FONT FOR ‘AND’ IN CITATIONS: r: and-rm—Cited ‘and’ in normal font

14. LABEL WHEN AUTHORS MISSING: *: keyxyr—Year blank when KEY replaces missing author (for natbib 7.0)

15. DATE POSITION: b: dt-beg—Date after authors

16. DATE FORMAT: m: yr-com—Date preceded by comma as ’, 1993’

17. INCLUDE MONTHS: m: aymth—Include month in date

18. REVERSED DATE: r: dtrev—Date as year month

19. TRUNCATE YEAR: *: note-yr—Year text full as 1990–1993 or ‘in press’

20. TITLE OF ARTICLE: d: tit-qq—Title and punctuation in double quotes (“Title,” ..)

21. TITLE PRESENT IN ARTICLE, INCOLLECTION, AND INPROCEEDINGS: x: jtit-x—Title is ignored

22. INPROCEEDINGS CHAPTER AND PAGES, LIKE INBOOK: y: inproceedings-chapter—produce pages after chapter just as in InBook

23. ARTICLE BOOKTITLE PRESENT: ?: article-booktitle—format booktitle

24. ARTICLE SERIES PRESENT: ?: article-series—article can has series

25. JOURNAL NAME FONT: r: jttl-rm—Journal name normal font

26. JOURNAL NAME WITH ADDRESS: y: journal-address—Include address field (in parentheses) along with journal name

27. BOOK TITLE FIELDS: y: book-bt—Field ‘booktitle’, or if absent field ‘title’, is book title

28. THESIS TITLE OPTIONAL: ?: thesis-title-o—Title is optional: no warning issued if empty

29. TECHNICAL REPORT TITLE: b: trtit-b—Tech. report title like books

30. JOURNAL VOLUME: b: vol-bf—Volume bold as vol(num)

31. JOURNAL VOL AND NUMBER: s: vnum-sp—Journal vol (num) as 34 (2)

32. VOLUME PUNCTUATION: c: volp-com—Volume with comma as vol(num), ppp
33. PAGE NUMBERS: f: jpg-1—Only start page number
34. POSITION OF PAGES: e: pp-last—Pages at end but before any notes
35. BOOK EDITOR W/O AUTHOR: : book-editor-booktitle—Book permits empty author, produces title before editor in this case
36. INBOOK PERMITS TITLE, BOOKTITLE, AUTHOR, EDITOR: a: inbook-editor-booktitle—Allow using both title/booktitle, both author/editor
37. CONFERENCE ADDRESS FOR BOOK, INBOOK, INCOLLECTION, INPROCEEDINGS, PROCEEDINGS: a: bookaddress—Italic booktitle followed by bookaddress in roman
38. NUMBER AND SERIES FOR BOOK, INBOOK, INCOLLECTION, INPROCEEDINGS, PROCEEDINGS: *: num-xser—Allows number without series and suppresses word "number"
39. WORD NUMBER CAPITALIZED FOR NUMBER AND SERIES: c: number-cap—Capitalize word ‘number’ as: ”Number 123"
40. WORD CHAPTER CAPITALIZED: c: chapter-cap—Capitalize word ‘chapter’ as: ‘Chapter 42’
41. COMBINING NUMBER AND SERIES: x: series-number—Series number as: ‘Springer Lecture Notes No. 125’
42. POSITION OF NUMBER AND SERIES: b: numser-booktitle—After book title and conference address, and before editors
43. VOLUME AND SERIES FOR BOOKS: s: ser-vol—Series, vol. 23
44. VOLUME AND SERIES FORMATTING: y: ser-rm—Format series roman, even when used with volume
45. WORD VOLUME CAPITALIZED FOR VOLUME AND SERIES: y: volume-cap—Capitalize word ‘volume’, as: ‘Volume 7 in Lecture Series’
46. POSITION OF VOLUME AND SERIES FOR INCOLLECTION, INBOOK, AND INPROCEEDINGS: e: ser-ed—Series and volume after booktitle and before editors
47. JOURNAL NAME PUNCTUATION: x: jnm-x—Space after journal name
49. PUBLISHER IN PARENTHESES: p: pub-par—Publisher in parentheses
50. EMPTY PUBLISHER PARENTHESSES: y: ay-empty-pub-parens-x—eliminate parentheses altogether if nothing inside
51. PUBLISHER POSITION: e: pre-edn—Edition before publisher
52. SCHOOL: p: school-par—school/address in parens: ‘(school, address)’
54. ISSN NUMBER: *: issn—Include ISSN for periodicals
55. DOI NUMBER: a: doi-link,doi—Doi forms a link to the publication, anchored to the volume or title
56. ‘EDITOR’ AFTER NAMES: a: bkedcap—‘Name Editor,’ as above, editor upper case
57. EDITOR IN COLLECTIONS: b: edby—In booktitle, edited by .. (where .. is names)
58. PUNCTUATION BETWEEN SECTIONS : c: blk-com—Comma between blocks
59. FINAL PUNCTUATION: c: fin-endbibitem—Command at end instead of period
60. ABBREVIATE WORD ‘PAGES’ : a: pp—‘Page’ abbreviated as p. or pp.
61. ABBREVIATE WORD ‘EDITORS’: a: ed—‘Editor’ abbreviated as ed. or eds.
62. OTHER ABBREVIATIONS: a: abr—Abbreviations of such words
63. ABBREVIATION FOR ‘EDITION’ : a: ednx—‘Edition’ abbreviated as ‘ed’
64. EDITION NUMBERS: n: ord—Numerical editions as 1st, 2nd, 3rd, etc
65. STORED JOURNAL NAMES: a: jabr—Abbreviated journal names
66. COMMA BEFORE ‘AND’: c: and-com—Comma even with 2 authors as ‘Tom, and Harry’
67. FONT OF ‘ET AL’: i: etal-it—Italic et al
68. ADDITIONAL REVTeX DATA FIELDS: r: revdata,eprint,url,url-blk,translation—Include REVTeX data fields collaboration, eid, eprint, archive, url, translation
69. SLACcitation FIELD: ?: SLACcitation—Produce SLACcitation field
70. NUMPAGES DATA FIELD: *: numpages-x—Do not include numpages field
71. REFERENCE COMPONENT TAGS: b: bibinfo—Reference component tags like \bibinfo in the content of \bibitem
72. ELEMENT TAGS: b: bibfield—Element tags like \bibfield in the content of \bibitem
73. COMPATIBILITY WITH PLAIN TEX: *: nfss—Use LaTeX commands which may not work with Plain TeX

A file apsrmp.dbj file equivalent to the following should result:

```latex

For a comparison between apsrmp.bst and apsrev.bst, see Section 30.3.10.

\authoryear@sw  Author-year citations: default value of \authoryear@sw is true.

\@booleantrue\authoryear@sw

\@bibdataout@rmp  When the journal is RMP, the meaning of the procedure \@bibdataout@aps needs to be different because of the way the author names are formatted. In other respects, it is the same.

\def\@bibdataout@aps{%  
\immediate\write\@bibdataout{An entry that controls processing of the revtex4-1.dtx.bst file has entry type @CONTROL. This entry’s cite key is apsrmp41Control, which serves as a version number.

@CONTROL{%  
apsrmp41Control%  
Say whether we want long bibliography style (the default), or the abbreviated style.

\longbibliography@sw{%  
,author="03",editor="0",pages="1",title="0",year="0"%  
}%  
,author="0B",editor="0",pages="0",title="",year="1"%  
}%  
}%  
}%  
}

Place a citation into the auxiliary file corresponding to this entry.

\if@filesw  
\immediate\write\@auxout{\string\citation{apsrmp41Control}}%  
\fi

\bibpunct The following commands effectively establish the style in which \cite commands are formatted. You can think of them as the second needed component for the bibliography.

\bibsection
\bibpreamble
\newblock Set up for author-year citations: when \NAT@set@cites executes (at \begin{document} time), the \@biblabel will be set to \NAT@biblabel.

Per Karie Friedman (friedman@phys.washington.edu), multiple citations are separated by semicolons, e.g., (Jones, 1999; Abbott and Smith, 2000; Wortley, 2001a), and multiple citations by the same author by commas, e.g., Abela et al. (1995, 1997a, 1997b). The third argument of \bibpunct handles the former.

The fifth argument puts a comma after the author when the year is not in parens: (Lee et al., 1996).

Incidently, this \bibpunct command specifies the natbib default values.
We define the sectioning command to use when starting the bibliography.

We change `natbib`'s `\NAT@def@citea` procedure to effect more elaborate punctuation for RMP: see item 473: `\cite` order punctuation: “If possible, `\textcite` should put the word ‘and’ between two citations and before the last citation in a list of 3 or more.”

```
\appdef\setup@hook{%
  We define the punctuation to use in the `\cite` command’s production.
  \bibpunct{(%}{%}{;}{a}{,}{,}
  We define the sectioning command to use when starting the bibliography.
  \def\bibsection{%\expandafter\section\expandafter\*\expandafter{\refname}\@nobreaktrue%}
  \let\bibpreamble\@empty
  \def\newblock{\ }
  \bibhang10\p@
  \bibsep\z@
  Per Mark Doyle, `\cite` is mapped to `\citep` in RMP.
  \let\cite\citep
  End of code to be delayed until after `natbib` loads.
%}
```

Footnotes in bibliography are consistent only with numbered citations, and are particularly nasty under `natbib`: the package will automatically change to numbered references if any `\bibitem` commands lack the optional argument. Therefore, we must uninvoke it now, even if invoked by the document. The same is quietly done with `natbib`'s `mcite` and `compress` options.

(AO 523) I changed the code that alters `\NAT@merge` so that it will not override when `\NAT@merge` has been set to `\z@`.

```
\@booleanfalse\footinbib@sw
\appdef\setup@hook{%
\footinbib@sw{%
  \class@warn{Footnotes in bibliography are incompatible with RMP.^^J%}
  Undoing the footinbib option.
}{}
\@ifnum{\NAT@merge>\@ne}{\let\NAT@merge\@ne}{}%}
\def\NAT@cmprs{\z@}
```

133
\eprint RMP requires the \eprint field in the bib entry to be set off with the word "eprint".

32.5 Table of Contents

We set up for auto-sizing of certain TOC elements. To do this, we override the definitions for the default TOC font (\toc@font), and define formatting for the needed elements (\l@...). Finally, we activate the autosizing by assigning \toc@pre and \toc@post.

\toc@font Set the formatting characteristics of the auto-indenting part of the TOC.

\l@section Determine which TOC elements are automatically indented.

Activate the TOC processing.

Here ends the programmer's documentation.

Change History

4.0a

General: 4.0d had twoside option setting twoside switch to false . 5

comma not space between email and homepage .............. 5

Initial version .............. 5

134
Move after process options, so \clearpage not in scope of twocolumn 5
Move after process options, so the following test works 5
multiple preprint commands 5
print homepage 5
protect against hyperref revtex kludges which are not needed now 5, 18
Rearrange the ordering so numerical ones come first. AO: David, what does this mean? 5
single space footnotes 5
use font-dependent spacing 5
\lastpage@putlabel: Move after process options, so \clearpage not in scope of twocolumn 35
\openone: use font-dependent spacing 81
\preprintsty@sw: comma not space between email and homepage 16
Rearrange the ordering so numerical ones come first. AO: David, what does this mean? 16
\ps@preprint: Move after process options, so the following test works 34
\ps@titlepage: multiple preprint commands 99
\twoside@sw: 4.d had twoside option setting twoside switch to false 21
4.0b
\@makecaption: One-line caption sets flush left 44
General: Added localization of \figuresname 5
Added localization of \tablename 5
AO: all code for 10pt is in this module. 5
AO: all code for 11pt is in this module. 5
AO: all code for 12pt is in this module. 5
AO: made aps.rtx part of revtex4.dtx 5
AO: remove duplicates 5
call \print@floats 5
Defer assignment until \AtBeginDocument time. 5, 68
Defer decision until \AtBeginDocument time 5
Define three separate environments, defer assignment to \AtBeginDocument time. 5, 69
First modifications by Arthur Ogawa (mailto:arthur.ogawa at sbcglobal dot net) 5
Frank Mittelbach, has stated in multicol: “The kernel command \footnotetext should not be modified.” Thus, I have removed David Carlisle’s redefinition of that command. Note, however, that later versions of multicol do not require this workaround. Belt and suspenders. 5, 50
Move this “complex” option to the front, where it can be overridden by “simple” options. 5, 18
New option 5
One-line caption sets flush left. 5
only execute if appropriate 5
Processing delayed to \AtBeginDocument time 5, 43, 46
Removed invocation of nonexistent class option groupauthors and all other class options that should only be invoked by the document. (Otherwise precedence of class options does not work.) 5, 33
Restore all media size class option of \classes.dtx 5
Stack \preprint args flush right at right margin. 5
\figuresname: Added localization of \figuresname 73
\paperwidth: Restore all media size class option of \classes.dtx 18
\preprintsty@sw: Move this “complex” option to the front, where it can be overridden by “simple” options. 16
\printfigures: call \print@floats 45
\printtables: only execute if appropriate
\ps@preprint: Defer decision until \AtBeginDocument time
\ps@titlepage: Stack \preprint args flush right at right margin.
\roarrow: AO: remove duplicates
\showKEYS\@sw: New option
\tablename: Added localization of \tablesname
\produce@preprints: (AO, 115) If three or more preprints specified, set on single line, with commas.
\ps@preprint: Do not put by REVTeX in every page foot
\ps@titlepage: Insert procedure \checkindate
\@appendixcntformat: (AO, 129)
section* within appendix was producing appendixname...
\@makecaption: Prevent an inner footnote from performing twice
\General: (AO, 115) If three or more preprints specified, set on single line, with commas.
(AO, 129) section* within appendix was producing appendixname...
*.-form mandates pagebreak...
also spelled “acknowledgements”:...
Do not put by REVTeX in every page foot...
grid changes via \ltxgrid procedures...
grid changes with \ltxgrid...
Insert procedure \checkindate...
Lose compatibility mode...
New \ltxgrid-based code, other bug fixes...
New option “checkin”...
Prevent an inner footnote from performing twice...
\close@column@grid: grid changes with \ltxgrid...
\frontmatter@abstractfont:
(AO, 123) add parskip to the abstract...
\widetext@grid: grid changes via \ltxgrid procedures...
\open@column@two: Grid changes with \ltxgrid...
\printfigures: *-form mandates pagebreak...
\printables: *-form mandates pagebreak...
\produce@preprints: (AO, 115) If three or more preprints specified, set on single line, with commas.
\ps@preprint: Do not put by REVTeX in every page foot
Insert procedure \checkindate
\@appendixcntformat:
section* within appendix was producing appendixname...
\@makecaption: Prevent an inner footnote from performing twice
\General: Also alter how lists get indented...
But alternative spelling is deprecated...
eprint takes an optional argument, syntactical only in this case...
make longtable trigger the head, too...
More features and bug fixes: compatibility with longtable and array packages. Now certainly incompatible with multi-
col...
New option...
\open@column@two: Also alter how lists get indented...
\preprint@sw: New option...
\printables: New option
\url: eprint takes an optional argument, syntactical only in this case...
General: adornments above and below...
Bug fixes and minor new features: title block affiliations can have ancillary data, just like authors; clearpage processing revamped, with floats staying in order; widetext ornaments...
New option showkeys...
\widetext@grid: adornments above and below...
\showKEYS\@sw: New option
